IT, Management & Organisational Change

Do you need research in one of these areas?

- Managing large-scale IT change and evaluating impact
- Strategic implications of future trends in IT
- Analysis of organisational structure and HR effects of IT change
- Evaluating impact of software on business processes
- Gamification (game-design thinking for non game applications)

Projects involve a group of students conducting research on an agreed business issue for an external business client.
About the students

Our students tell us they are attracted to the MSc in IT, Management and Organisational Change because of our great links with industry and the recognition that information technology has become a strategic and organisational change issue rather than only a technical one.

Our students gain advanced grounding in key areas such as information technology and organisations, managing change, knowledge management, systemic interventions, strategy and IT management, project management, and analysis, design and innovation. Many of those who join the programme are already several years into their careers – typically working in an IT or management-related context. Our alumni have gone on to fill a variety of management positions (consultants, operations managers, business analysts etc.), working for companies such as BP, Accenture, IBM, Ford Motor Company and Deloitte to name a few.

Eligibility

We work with a number of major companies including Accenture, Deloitte, SAP and Microsoft. To be considered for this programme, your company / organisation should be medium-sized or larger. Micro and small businesses should enquire with the Company Projects Manager who will assist in directing you to an alternative programme that is open to smaller firms.

Cost

Clients are expected to pay for any costs incurred whilst undertaking the project. Costs will vary between projects and a budget should be agreed with the students at the outset and costs agreed whilst they are scoped out the different ways to undertake the work.

Project Timeline:

Application period
September - March

Project delivery
June - July
