SuDS: Changing The Landscape

September 23rd 9-5pm, Lancaster University Management School

(Green Streets planter image courtesy of Paul Cone, Bureau of Transportation, City of Portland)

It is intended that a combination of the proposed National Standards for Sustainable Drainage Systems and the SuDS Approving Body (SAB), when finally implemented will *change the landscape* of future developments. Lead Local Flood Authorities (LLFAs), who will administer the SAB role, and developers will be required to work closely to agree SuDS solutions that will authentically contribute to sustainable development.

This empowering conference will debate the key issues and update its delegates regarding the current status of the SuDS Standards and the SAB implementation. Key issues will include planning, retrofit, SuDS techniques, case studies and maintenance. Furthermore, the 2006 British Water led Technical Mission to the United States of America will provide a robust backdrop to consider what SuDS progress has been made in the UK since the report's conclusions and recommendations were published eight years ago.

Key Speakers

Jeremy Jones will give the keynote speech. Two additional members of the original USA Mission team will be joined by other notable experts in this sector to complete an excellent programme of speakers.

Audience

The conference will be of interest to developers, consulting engineers and drainage designers, contractors, SABs and LLFAs, planners, water companies, the Environment Agency and anyone involved in the provision of surface water management and SuDS. Delegates will have the opportunity to comment, ask questions and gain an up-to-date picture of best practice.
