UK Education and Everyday Life:

Campaigns for ‘employability’ after the globalised turn

Dr Phoebe Moore, University of Salford

p.moore@salford.ac.uk

With pressures from employers, government ministries, and the new paying student/customer, worker education and training in the United Kingdom has begun to dramatically restructure to accommodate quickly globalising markets and within the context of increasingly intimate relations between business and the public sector.

Simultaneous to continued flexibilisation of the labour market, New Labour has increasingly sought private sector involvement into an increased range of avenues toward education of the ‘citizen’, or the ‘learner worker’, to become accustomed to, and reproductive of, the vagaries of neoliberal capitalism in the day to day. Private sector involvement into the public as is discussed and advocated within Lord Sandy Leitch’s Review of Skills 2006 is a strategy that will transform education forever in this nation and will result in market liberalisation and market-led ‘progress’, despite claims for a demand driven transformation in policy. The impact this will have on workers reflects growing insecurities resulting from the rolling back of the welfare state and in the context of increasing rates of hidden unemployment as depicted by Beatty et al.
This contemporary scenario reveals striking resemblance across hemispheres in its contradictory convictions toward inclusion and emancipation; contradictory in the sense that related projects do not fully take into account the impact that the burgeoning flexibility rhetoric has had upon workers in the formation of updated subjectivities that are expected to assimilate to the requirements the state has ordained through campaigns intended to promote citizens’ ‘employability’.

The citizen

…has become a political fiction… the externality of the citizen in relation to his own everyday life becomes a necessity projected outside of himself; in models, in fanaticisms, in ideolisations, in fetishisms. Wherever it appears, the cult of personality has a political sense and can never be reduced to a peripheral ideology; it is bound up with the nature of the State… the externality of the citizen and his projection outside of himself in relation to his everyday life is part of that everyday life.⁴

A perception of the ‘employable’ individual appears to be gradually replacing or at the very least, challenging, discussions for ‘employment’ or job creation. The ambiguity of the emerging debate seems to require a marriage of the productive individual (what Lefebvre calls ‘productive man’) with a contemporary form of idealised citizenship (or Lefebvre’s ‘political man’) that in practice requires people to become entrepreneurs of
their own fates in unprecedented campaigns, apparently triggered by unregimented globalisation.

Contu (et al)\(^5\) are very critical of the ‘common \textit{imaginaire}’ that has emerged in the construction of a particular kind of learning discourse; one that aims to create an ‘incurable learner’,\(^6\) with campaigns that construct a certain set of standards for individuals’ employability, and the campaign’s crucial companion, lifelong learning. The campaign marginalises more than it includes, as it places a homogeneity of expectations on all people, demanding certain types of capabilities for learning, excluding for example autistics, manic-depressives, schizophrenic people, and perhaps, ‘eccentrics’, just to name a few. Britain’s employability campaign demonstrates a significant shift in what is expected of citizens via the formulation of their subjectivities in a normalisation process with the aid of the private sectors’ renewed demands for skills.\(^7\)

The Learning and Skills Council is working closely with the newly formed Department for Innovation, Universities and Skills (DIUS), Jobcentre Plus, the Sector Skills Development Agency (SSDA), and the Department for Work and Pensions (DWP) to transform the way people think, feel and act about learning and skills… we will achieve this ambition through a lasting, memorable and actively supported campaign which will be used and developed by everyone in Further Education.\(^8\)
The highly personal and invasive language used in the campaign begins to move stealthily into the territory of subjectivities and people’s lives. ‘Everyday life’ has been ascribed by elite voices to working classes or to the supposed types of people/workers who are incapable of understanding or living in the enlightened and perhaps post modern world, an assumption that has been heavily critiqued on the left. How does the employability campaign deal with the everyday life but as a criticism to the way people may have traditionally chosen to live, i.e. in a way that is not all-consumed with preparing oneself for supposedly immutable instability of the labour market? Employability of the self is a concept that holds absolutely no meaning if it is not a lived and constructed experience by people whose relationship to their work is increasingly subordinated to global and local changes to labour markets. So to theorise this transition of governments’ attempts to upskill its labour market in various guises, Lefebvre’s discussions of the citizen and everyday life are observed.

This paper looks at the process of restructuring of education in the UK as part of a global hegemonic project toward the expansion of neoliberal capitalism in the sense that education is becoming a service that is no longer public, but which is becoming increasingly subordinate to capital, and is thus being put under a process of liberalisation to supposed market demands. This is seen in the developing relationship between education, which was historically, a public service, and the private sector; a relationship that imposes a managerial regime onto subjects toward ‘objectification of subjectivity’ in a process of governmentality that points toward what Foucault termed ‘biopower’, or a
subordination of bodies through particular means of social regulation under conditions of domination.\(^9\)

The article looks at the idea ‘employability’ in conjunction with labour market flexibilisation, and claims that while it is presented as a one-size-fits-all escape clause from insecurities of the market, it can also be seen as a management technique over workers’ everyday lives, and for the management of any potential social unrest resulting from increased instability of the economy and the resulting ambiguities of employment, and the escalation of the hidden unemployed.

The second section then looks closely into the developing relationship between business and education in the UK, with an examination of the Leitch Report and requisite recommended relations between business and education. The long-awaited and highly influential Report, commissioned by the New Labour government in 2004 and published in December 2006, demonstrates that the United Kingdom is significantly lagging behind other postindustrial nations in skills levels as well as productivity levels, and encourages a demand-led initiative to compensate. Leitch suggests various ways to restore the UK’s international status in the general categories of basic skills improvement through the increase in people’s aspirations and the awareness of the ‘value’ of skills, and the creation of an integrated employment/skills service; all with accelerated private sector relationships. The campaign, and the de facto privatisation of education, implicates a very different relationship between the citizen and the state, as well as a reformation of what is
expected of workers’ subjectivities as a means toward the colonisation and microregulation of workers’ everyday lives.

**Employability of Worker, Flexibility of Work**

New Labour intends to guide the process of integrating the private sector into the public to develop and promulgate a high skills project in response to Leitch’s recent criticisms. The national Employability Skills Programme and the related ‘The future, it’s in our hands’ campaign launched in August 2007, and the deployment of the Sector Skills Councils seem to offer a rosy hue of mobility and prosperity to people whether employed or not, with enormous value placed upon education. To remain employable, one must be a self-imposed lifelong, incurable learner. The incurable learner is the character sought within key skills modules at the level of Higher Education, and employability is the ‘keyest of concepts’. Harding suggests a cross-university key skills module that would become implemented over a two year process; one whose implementation, she realises, could be perceived as a ‘loss’ or a top-down imposition onto other course designers, but she does not once question the ethics of this ‘real life need’ for academics to work together to put this kind of module into place. Harding talks about a range of ‘unicorn’ concepts, which are ‘flexibility, imagination, ability to ask good questions, to hypothesise what a situation might be like under other circumstances, and all our “C” words, creativity, confidence, challenge, curiosity, connecting, and communication’. These skills can perhaps function as a formula that people can adopt, in order to maintain personal employability, and apparently have replaced specific job related skills, that transcend all other abilities.
‘Employability’ is a highly subjective term, and requires the productive woman/man to become a citizen/worker, who is also labelled a learner worker. While the unemployable in the late 19th and early 20th century were those who were unable to work, or were generally demonised and put into various derogatory categories, this concept has altered dramatically to unrecognisable proportions as a result of globalisation and the changing relationship between industry and education. Rather than specific skills and abilities alone, workers are expected to have particular ‘labour attitudes’.

Employers have begun to place emphasis on work ethics and soft skills like communication, to the extent that in 2006, employers cite communication skills, worth ethic, and personality as the top three desirable skills, placed above literacy, qualifications, and numeracy. Only 26 per cent of the 1,400 employers surveyed in the Chartered Institute of Personnel and Development (CIPD/KPMG) quarterly Labour Market Outlook placed literacy and numeracy at the top of rankings. The August 2006 report indicates that UK employers now emphasise soft skills over literacy and numeracy in spite of the concern regarding public examination standards in recent years. 40 per cent of employers indicated that a key attribute they seek is excellent communication skills, and 32 per cent even emphasise personality as a crucial factor!

Too often, employability is used as a mediator that fails to address unequal access to job markets and is merely a performance indicator that neglects to note ‘how social structures such as gender, race, social class and disability interact with labour market
opportunities'. Generally, though, employability has become increasingly defined as the
ability to adapt to flexible patterns of employment and the ability to become lifelong
learners. The demands for adaptability and self-management have actually been
critically deemed an ‘ethic of employability’ for unemployed youth. This ethic is
increasingly evangelised in a judgemental tone that appears to be encroaching on lives of
all age groups.

This discussion is prevalent particularly in the context of rapid shifts in internal labour
market patterns. Ireland has lost more than 10,000 jobs due to outsourcing of
manufacturing and service work, and has also lost 200 professional accountancy jobs to
Poland. In the USA, 2.1 million manufacturing jobs have been shipped overseas.
McQuade and Maguire write about the impact that migration of all types of work will
have on the employability of Irish nationals, and in particular the impact that this will
have on its wealth of skilled and experienced manufacturing workers. People who
constitute the Irish manufacturing workforce predominantly hold more higher and further
education qualifications than British workers and this type of disparity may be part of the
impetus for reskilling seen in the UK. Nonetheless, the issue remains the same. As long
as capital investors seek out the cheapest sites of production, there will be competition for
low cost workers at all levels of the game, and thus pressures will be placed on workers
in developed, post-industrial economies to keep afloat with all levels of competition.

Debates across Europe in the discussion toward employability, particularly in the pursuit
of the common European Higher Education Area as defined by the Bologna Process, urge
member nations to integrate the teaching of skills into higher education curriculum that is not just vocationally driven, but involves ‘holistic development of the individual’. Globalisation and the rapid renewal of information and technology apparently mean that graduates must be capable of behaving with ‘flexibility to operation in a changing environment… graduate employability is not only the technical skills and competences to do the task, but, also, such endemic competences as are necessary to manage the modern labour market’. At the ‘Bologna Seminar on Employability in the Context of the Bologna Process’ in 2004, a range of stakeholders were challenged to work toward incorporating a model of employability to suit social and economic changes. ‘Society, the labour market and individuals demand from higher education to make a significant contribution in order to help achieving sustainable employability, including continuous self-development… lifelong learning should be understood as a meaningful way of enhancing one’s employability’. 

Harvey and Bowers-Brown identify four broad areas of activity that higher education institutions have sought across Europe, for the development of students’ employability:

- Enhanced or revised central support (usually via the agency of careers services) for undergraduates and graduates in their search for work. To this can be added the provision of sector-wide resources.

- Embedded attribute development in the programme of study often as the result of modifications to curricula to make attribute development, job seeking skills and commercial awareness explicit, or to accommodate employer inputs.
• Innovative provision of work experience opportunities within, or external to, programmes of study.

• Enabled reflection on and recording of experience, attribute development and achievement alongside academic abilities, through the development of progress files and career management programmes.\(^2^5\)

These responsibilities are thus shared across various institutions and groups within society, in an increasingly coherent project toward producing employable subjects via education strategies in EU member states.

In the UK, the Committee of Vice-Chancellors and Principals as well as the Department for Education and Employment attempted to express employability in terms of ‘knowledge, skills and attributes that graduates are expected to be able to demonstrate that they have acquired in higher education’.\(^2^6\) This preceded New Labour’s modern welfare reform project within the Budget 2007, entitled ‘Employment for All’, which is in effect, a modified version of Keynes’ vision for full employment that promises to deliver all the ‘support [that citizens] need to find, retain, and progress in work, and adapt to a benefit from a global labour market’.\(^2^7\) New Labour’s principles of welfare reform were set forward in the Budget as two related goals:

• To ensure employment opportunity for all, giving everyone the opportunity to fulfil their individual, social and economic potential. Achieving this requires effective labour market policies set against a background of macroeconomic stability.
To foster a world class skills base, equipping everyone with the means to find, retain and progress in work, and the ability to adapt to and benefit from a globalising labour market. Integrating the employment and skills agenda is central to achieving this.

These goals are underpinned by several key principles, including the relatively conservative mantra of ‘rights and responsibilities’, which apparently means that ‘everyone should have the opportunity to work and for this to be effective, [reform] needs to be supported by access to appropriate training, information and advice… these responsibilities on the part of the government are matched by the responsibility of individuals, where possible, to prepare for, look for and engage in work’. So the government has adopted an eclectic blend of the human capital and work-first models, propped up with a terminology that fits with New Public Management ideas and agendas as private sector techniques begin to dominate public sector management in the name of neoliberal social progress. Labour’s version of ‘rights’ thus become transformed to construct an outer frame of ‘community’ expectations and supposed needs rather than an outer frame that allows for alternative personalities/types of individuals with certain needs. Government programmes therefore are now aiming to prepare workers for international competition and have begun to focus on training people to achieve ‘greater individual self-sufficiency over job stability and career advancement’.

In 2000, the Higher Education Funding Council for England (HEFCE) commissioned research into teaching and learning of employability skills and its relation to graduate
employment based on 34 departments in eight universities. Results demonstrated a positive association between graduate employment within six months of graduation and participation in sandwich placement during studies, or ‘participation in work experience’, as well as ‘employer involvement in course design and delivery’.\textsuperscript{30} In later years, HEFCE promised subsidies to Universities proving their commitment to an employability agenda. However, tensions lie within this agenda, because ‘employability’ in the context here is difficult to define, to measure, to develop, and furthermore, to transfer. Thus the ‘elusive quality of employability makes it a woolly concept to pin down’.\textsuperscript{31}

Inherent to the employability campaign is a suggestion of a kind of link toward emancipation from the drudgeries of everyday work and production. Will workers become entitled to producing ‘works’ rather than ‘products’? Or is this campaign another feature of the ongoing survival of capitalism\textsuperscript{32} in its invasion into people’s everyday lives? Is this characteristic of the subsumption of lives to capitalism?\textsuperscript{33} Is this campaign in fact, a criticism of life choices and personal decisions on the way to manage one’s personal time and space and energies? The latter appears to be the case, considering the recommendations toward private sector involvement into education, as work becomes less and less separate from accepted definitions of ‘life’ and the flexibilisation of work and of people’s lives, as is shown in the next section.

\textit{The hidden unemployed, and flexibility}

Will the employability campaign actually prepare workers to actually find and keep work, or is it partly designed to manage potential labour unrest that can happen in periods

12
of instability? In the UK, unemployment has fluctuated throughout its contemporary history, and the introduction of flexibilisation of work agreements, wages, and employee expectations are one indication of proposed management of these fluctuations and rising uncertainty. After the war, the rate of unemployment in the UK stayed below three per cent to through the 1970s, rose to 13 per cent in the mid 1980s and then fell again in the late 1980s. In the 1990s, unemployment rose once again but fell in the earliest years of the 21st century.34

In 2001, 14 million people lived below the unofficial poverty line (measured as half the average income) which was well over double the 1979 figure of five million: 20 per cent of females earned less than 200 pounds per week, compared with 12 per cent of males; and over 75 per cent of part-time workers earned less than the average hourly wage.35 This research demonstrates a rise of a wave of hidden poverty, a precursor to the burgeoning recognition that supposedly falling unemployment figures are not as reliable as may first appear. The figures from 1997 to 2002 were impressive with a fall in unemployment by 560,000, but since 2002, there has only been a fall of 10,000 (Elliot 2007).36 On top of 900,000 people claiming benefits and out of work in 2007, 1.7 million people make up a considerable contingent of excluded people, called the ‘hidden jobless’.37 Official unemployment figures fail to count those on incapacity benefit or those marginalised altogether out of the welfare system, and do not represent areas outside of the affluent areas in the south of England.
By the winter of 2006 – 7, the Chartered Institute for Personnel Development (CIPD) reported that despite the Labour Force Survey (LFS) of households conducted by the Office for National Statistics, which shows a rise in total UK employment of 14,000 to just over 29 million in the final months of 2006, the actual proportion of paid workers has not changed. The quarterly rise in employment is a seasonal adjustment, the CIPD notes, and in fact, masks a fall of 52,000 in actual employment, as people in self-employment rose by 49,000, and 22,000 more individuals entered government schemes. So the number of full time employees, the CIPD reports, actually fell by 105,000, and perhaps most interestingly for the present argument, there was a rise in temporary employment by 35,000. These figures demonstrate that claims of the Keynesian vision for ‘full employment’ cannot be justified and would partly explain New Labour’s recent explicit claim that ‘the government’s long-term goal is employment opportunity for all – the modern definition of full employment’.38

Questions of employment, unemployment and job insecurity have been exacerbated by rapid flexibilisation of work. Flexibilisation became a national priority in the UK during the Thatcher years, and from 1981-1985, flexible workers increased by 16 per cent to 8.1 million, while permanent jobs decreased by six per cent, to 15.6 million. Flexibilisation was typically achieved through the following methods:

- Functional flexibility: employees are expected to be flexible toward retraining so they can be used in more than one aspect of production with little cost to the company.
- Numerical flexibility: part time, sub-contracted and temporary workers who are used to respond to quickly changing needs of the business.
Financial flexibility: emphasis placed on payment systems associated with specific jobs and performance abilities, rather than ‘across the board’ payment systems.  

As a result, employees became divided into core and peripheral groups, and in 1985, an NEDC report entitled ‘Changing Working Patterns and Practices’ showed that most companies surveyed had taken clear steps toward numerical flexibilisation in particular, affecting ‘manning practices’ to achieve this end.

Also in 1985, the Institute for Manpower Studies published a report that distinguished between traditional and new reasons companies gave for requiring temporary workers. Traditional reasons included holiday and sickness cover, seasonal variations in workload, or to accommodate certain one-off events or to launch new varieties of a product or service. Whereas, ‘new’ reasons for requiring temporary staff included, in 1985, the following factors:

- To avoid recruitment of permanent employees at a time of uncertainty about future employment levels
- To avoid future costs of making permanent employees redundant
- To avoid the costs associated with the recruitment and employment of permanent staff (advertising, training, pensions, holidays, etc).

While these flexibilisation arrangements began during Thatcher’s government, there does not seem to be a dramatic disassociation from this policy in recent years. In these early years of New Labour’s government, a burgeoning trend began to form, wherein the only
‘real’ subjectivity emerges from corporate and industry demands, and wherein the actual subjects, or worker ‘citizens’, or students in employability-forming education schema, have very little voice at all.\(^{43}\)

The OECD compared Britain’s flexibilisation campaigns with the United States, Canada, France, Germany Italy and Japan (see Table 1). The UK was ranked at a similar level to the United States and Canada in its approaches toward downsizing and outsourcing, as well as the introduction of part time employment. An OECD Jobs Study claimed in 1994 that employment policy should aim ‘to improve the ability of economies and of societies both to cope with, and benefit from change, by enhancing the ability to adjust and to adapt, and increasing the capacity to innovate and be creative.’\(^{44}\) Flexible and deregulated labour markets were predicted to be the most productive, but even this claim is debatable.\(^{45}\)

Flexibility has been promoted as an emancipatory, pro-worker option, and the argument here is not intended to discredit the usefulness of flexible work hours for workers who require certain types of flexibility to suit certain chosen lifestyles. Women workers whose choices for responsibilities take them outside of the office and into the home are often served well by possibilities for flexible hours. Flexibility of work hours and the work/life balance that some employers offer can be extremely useful for employees who also care for family members, for example.

Even so, flexibility and part-time work opportunities do not ‘cover all forms of atypical employment in which women are often found’,\(^{46}\) and the agenda of the current
government creates a smooth homogeneity of expectations which collides with the
diversity of actual people. Flexibility often refers to liberalised job models that do not
necessarily empower workers, but cause workers to take on an increased range of
responsibilities. ‘Job enrichment’ is one typical flexibilisation technique, which is a
euphemism for workers’ learning how to perform an increased range of responsibilities
for the company which employs them. On the one hand, taking on more responsibilities
can allow people to acquire new skills, but in effect, people often find themselves doing
more than one person’s job. Flexibility can be beneficial for people if it is chosen
according to alternative priorities, but too often, flexibility refers to a range of
requirements that render employees powerless over their own work, and their day to day
lives. Rubery and Grimshaw’s ‘Indicators of labour market flexibility’ outline the
implications and problems with flexibility in practice (see Table 2).

Again, there was a substantial quarterly rise in the number of temporary and thus flexible
employees in the winter 2006 during which time there was an unusually high increase of
26,000 people taking temporary jobs solely because they could not obtain permanent
jobs. Workers’ lives and subjectivities are challenged in this unsettling environment,
and in conjunction with flexibilisation rhetoric, the relations between the public and the
private sectors continue to flourish.

So in the context of flexibilisation of the work force and growing hidden unemployment,
the government works toward a transformation of ideas that define how skill is
understood. ‘Skill’ takes on a range of factors that as concrete strategy can produce a new
kind of worker who is the learner/worker, someone who can become employable rather than necessarily employed. But even the employed are being forced to deal with the ‘rigidity and constraint’ that flexibility incurs. Overall, employability has shifted from the simple notion of those who are ‘able’ to work, to a reliance on workers’ capabilities to adjust to rapidly changing world of deregulated labour markets, and the way that workers can be trained into this mentality defines the contemporary employability campaign. Employability is a concept that appears now to stretch beyond solely personal factors, but must include the awareness that individuals now encounter a range of barriers to prevent access to the labour market due to ‘globalisation’. The impact that the transformation of this idea has had on education policy is of utmost importance if we are to understand how to maintain any semblance of well being or personal control over our every day lives in the changing world.

Private sector involvement into education and skills development

The Secretary of State for Education and Skills’ 2005 – 6 grant letter written to the Learning and Skills Council (LSC) states that ‘we need a real determination to change the way training is designed and delivered to meet the priorities of employers. In the Skills Strategy, we set out the Government’s intention to rebalance public and private contributions to the cost of learning, so that they better reflect the benefits and financial returns to learners and employers’. Pressure has thus been applied to both employers and public sector institutions to cultivate an environment that will facilitate a particular type of worker, who, regardless of skills level, will be able to survive unstable job markets.
The case of the UK is particularly relevant in debates that look for the most appropriate ways to prepare workforces for the globalising world and for ways to navigate reskilling of a curiously underprepared labour market. As this scenario has unfolded, the Sector Skills Development Agency, soon to become the Commission for Employment and Skills, is the latest evidence of growing corporate power and strengthened networks between business and education with the intention of creating a workforce that is subject to the contemporary ‘demands’ of capital.

New Labour claims that its recent responses to the Leitch Report, and related shifts in policy, are a ‘demand side’ initiative,\(^5^0\) which supposedly can uproot the leftovers of the dramatically deregulated market-driven supply side, monetarist economics that were definitive of Thatcher’s government. But New Labour should be careful in its liberal use of the term ‘demand side’, as from 1997, its policy has typically demonstrated a mixture of monetarist and Keynesian supply side aims, nicknamed the ‘third way’. The only adjustment that the present set of initiatives seems to make toward a demand side initiative is to actively invite employers and the private sector to become more involved in the articulation of the types of skill needed for its world class skills ‘ambition’.\(^5^1\) In fact, monetarist ideas, which usually inform supply side policy, hold that the market should be free from government intervention and that private enterprise and entrepreneurialism should be encouraged. In particular these latter two ideas are embraced by New Labour, and so, a dedication to demand side policy is approximate at best.
But to support claims toward a ‘demand’ side scheme, several institutions and programmes have been established by the New Labour government to arrange the involvement of the private sector into education and skills development. These institutions are part of an ‘Entrepreneurial Spirit [that] Sweeps the Nation’, which the Learning and Skills Council News Release site declared in July 2007. Entrepreneurialism is apparently something that can be cultivated in the classroom, and the learner worker with a spirit of individualism and self-improvement ideologies will be best served by the following set of initiatives created in the supposed drive toward a demand side economy. This system is sought through the following objectives:

- Transform incentives of providers to react to employers and individuals rather than meeting supply side targets.
- Streamlining the Learning and Skills Council with the main role being to manage the Train to Gain programme (support to employers for training) and individual learning accounts (support to individuals for training).
- Funding should be routed through mechanisms which put effective purchasing power in the hands of the customers. Move away from funding the provider to funding the customer.\(^{52}\)

Perhaps the most relevant institutions for the UK’s contemporary skills campaign are those involved in the Skills for Business network, which is made of 25 Sector Skills Councils. These independent employer-led training and research organisations which also
function as policy consultants for relevant policymakers (this type of organisation has been called a ‘quango’). The SSCs are funded, supported and monitored by the Sector Skills Development Agency (SSDA), and exist solely to ‘boost the productivity and profitability of the UK’. The SSDA works to identify and tackle skills gaps on a sector by sector basis. ‘In short’, the Agency’s website reads, ‘we’re trying to get the right people with the right skills in the right place at the right time’.

In 2002, responsibility for the SSCs was handed over from the Department for Education and Skills to the SSDA, which has worked very hard to appropriate a ‘powerful role for employers in the skills agenda across the UK’. Complementary proposals, beginning in the 1990s when the Labour Party Manifesto deemed Britain’s future as a ‘high skill, high wage and high technology’ nation, included a National Investment Bank; enhanced allowances for related investment; increasing tripartite influence on economic policy; and a training revolution that was intended to contribute significantly to enhancing skill. These initiatives are indicative of the not-so-gradual shift from old labour to ‘New Labour’, which was originally a Labour party conference slogan used in 1994, becomes definitive within the Party’s manifesto 1997 rhetoric toward ‘personal prosperity for all’ and sets the stage for the ‘welfare-to-work budget’, which was expected to be ‘funded by a windfall levy on the excess profits of the privatised utilities, introduced in this Budget after we have consulted the regulators’. Over the following years, a range of policies were put into place to support these aims and to encourage increased partnerships between the private sector, the public sector, and the individual. In 2007, as an indication of these relationships, the Universities UK network boasts 131 UK University heads as
members. This network highlights ‘knowledge transfer’ in response to the Government’s promise for an additional £450million (recurrent funding) for Universities’ establishments of community and industry links which would provide a ‘route to innovation and development at all levels’ and inspire a ‘renewed drive for entrepreneurialism and wealth creation’.

Another recent justification of the restructuring of education and the corresponding involvement of industry as is seen by the introduction of SSCs only requires a hearing of Lord Leitch’s recent revelation that the UK, despite being the fifth richest economy in the world, is in danger of lagging significantly behind many of the advanced OECD nations. Productivity failure is depicted as a direct result of education and training failures. In this Report, the UK is ranked 17th on low skills, 20th in intermediate and 11th in high skills. The number of adults lacking functional numeracy has reached 7 million; and 5 million lack functional literacy. Skills are not just a driver in becoming an internationally competitive nation, but this research demonstrates that it is the driver, and thus, the reasoning goes, education must begin to respond directly to employers. The Report demanded a tangible policy response and the Government seems to have absorbed its advice whole heartedly, as is seen in the DIUS publication World Class Skills: Implementing the Leitch Review of Skills in England.

In a formal semi-structured interview I conducted with two policy consultants at the SSDA on the 9th May, 2007, it became clear that the precise reasoning for the formation of the Agency is to garner information directly from employers and to put pressure on employers to train staff to prepare the labour market for contemporary changes.
Perceived changes will reduce state input into telling the unemployed which skills they should have in order to go and get a job, as the SSDA, soon to be the Commission for Employment and Skills, is committed to getting this information from employers.

According to the two consultants, the hardest workers to recruit in late 2006 were managerial, skilled trade, and sales and customer services staff. This could be a result of inadequate training, as can be gathered from the Leitch report, or as one employer told the CIPD, ‘there’s reluctance for the average British employee to change jobs… and do things they don’t particularly like. There’s more willingness among eastern Europeans to do these jobs’. 59

The consultants I spoke to at the SSDA also stated that some of the biggest skills gaps are in entry level jobs that do not require technical skills such as cleaners, and hence this has been linked to immigrant labour issues. Employers are saying they are not as concerned about qualifications as they are for qualities such as attitude, punctuality, and flexibility to change job positions. Even these qualities contract themselves within their own remit. Negri discusses the temporal features of the hegemony of neoliberalism generally, whereby capitalism requires the measure of time to prevail although subjectivities require the space to expand in multiple ‘times’. 60 Not to mention, the very idea of time as confined to the restrictions of punctuality seems to contradict the basis for flexibility.

One of the SSDA consultants was furthermore wary of the flexibilisation debate for reasons to do with union rights, and asserted: ‘I just have one question in my mind about flexibility, which reminds me of the Thatcher years, i.e. does flexibility mean a decline in
union rights? Is that where we are going with flexibility?’ Or, does flexibility refer to the ambiguities of the structure of social class in the contemporary economy? Brown and Hesketh note that that the way management see employability of workers is not an exact science, but is dependent more on a managerial ‘science of gut feeling’, combined with applicants’ reputational and social capital, associated with class and background. This is an important claim as Western job markets become increasingly unstable, and as flexibility is becoming increasingly accepted as the norm.

A crucial question in this discussion, of course, is who is going to pay for what, and what the implications of this relationship are. Employers, the government, and workers alike are expected to participate in financing European-wide campaigns toward lifelong learning, as is stated in the Report of the Employment Taskforce chaired by Wim Kok, who was commissioned by the European Council held in Brussels in 2003 to carry out research on ‘employment related policy challenges and to identify practical reform measures that can have the most direct and immediate impact on the ability of Member States to implement the revised European Employment Strategy’. In order to raise efficiency of investment in human capital, all EU Member States’ governments would be required to ‘lay the foundations for lifelong learning for all. Employers must take on responsibility to build employees’ skills throughout their career. Individual citizens must also invest in their own futures’.

The European Taskforce Report goes on to make specific recommendations for each player in this recommended tripartite configuration of forces. Governments ‘must lay the
foundations of lifelong learning systems that are accessible to all… a number of Member States have implemented this approach on a voluntary, compulsory or mixed basis through sectoral or regional basis’. Employers are then described as having more efficient means to provide relevant training, but the Report states, employers often do not provide this, due to the threat of poaching from other companies. This throws light on a completely contradictory element of the employability campaign, for, if workers are expected to become employable through lifelong learning, then, should they not also take advantage of the choices for employment that presumably will naturally open up to them? This paradox is exacerbated by the rise in temporary contracts, and employers who are successful at becoming ‘employable’ are surely justified in limiting their loyalty to employers who will not offer guaranteed jobs. Nonetheless, employees are told that ‘individuals will need to update their competences beyond initial education to maintain their employability and enhance their career prospects throughout a more diversified working life… individuals should therefore be encouraged to take more responsibility and participate financially in the development of their own human capital’. So, putting these EU recommendations under scrutiny reveals that it is workers, or potential workers, who are given the most responsibility in this division of labour, and their rights seem to stop at voluntary education schemes which require remuneration.

Colonisation of the everyday lives of workers is clearly occurring in this scenario, as workers are expected to embrace their own alienation from their work, are told that the project of self-employability generation that must become a part of their subjectivities and self worth. The 2004 UK Pre-Budget Report states in its ‘Skills in the Global
Economy’ that ‘increasingly, job security relies upon employability rather than the old notion of a job for life, and employability depends upon acquiring the skills that employers need. More widely, having skills can enable people to contribute to their communities and to aid personal fulfillment’. As discussed here, elite reports on employability now include notions of citizenship, of subjectivity, and of self-fulfillment: ideas that infiltrate increasing areas of life. It was also in this 2004 report that Sandy Leitch, Chairman of the National Employment Panel and formerly Chief Executive of Zurich Financial Services was commissioned to conduct the independent review mentioned; the Leitch Review of Skills (2006).

Leitch criticises the UK for its low skills base and claims that ‘evidence shows that around one fifth of the UK’s productivity gap with countries such as France and Germany results from the relatively poor skills of workers in the UK. If the UK had similar skills levels in these countries, its national income would be significantly higher’. Inevitably, there has been some dispute over the research findings in this Report, which emphatically suggest that companies need to become more involved in the training of their employees to basic skills levels, with actual penalties for businesses that refuse to comply to the ‘skills pledge’. London First disputes the Report’s claim of low productivity in comparison with France, saying that the average French worker does NOT produce 20 per cent more gross domestic product per hour than the average UK worker, and that French labour costs are higher than the British, as well as the typical situation of lower efficiency seen in French organisations. Gordon Brown has pointed out that in the past 10
years, the UK has risen from bottom to second in the measure of GDP in G7 nations ‘so overall, we are not convinced that the UK actually has the productivity problem as described by Leitch’.

Nonetheless, this recent research demonstrates the urgency of the restructuring of education to suit business demands, and the clear transformation of expectations on workers in the new world of work.

The Learning and Skills Council (LSC) was quick to welcome Lord Leitch’s ideas for how to integrate world-class skills into Britain’s workforce. The Chair of the LSC, Chris Banks, remarked that ‘This is a clear rallying call and Lord Leitch has set ambitious challenges to employers, learners and to those who work with them. The LSC is in full agreement that we need to seize this opportunity and ensure that the ambitions of being world-class in skills are met’. The Council acknowledged in December 2006, directly after the Report was published, that they condoned the recognition of programmes and services operated through the Council, such as Train to Gain, Apprenticeships, Skills for Life, and the National Employer Service. The Department for Innovation, Universities and Skills (DIUS), which was previously part of the Department for Education and Skills (DfES), responded to Leitch in July 2007 with a 75 page report entitled ‘World Class Skills: Implementing the Leitch Review of Skills in England’. The report condoned Leitch’s recommendations and pursued ‘world class ambition’ in the form of specific actions to be taken in the following few years. The Departments of HM Government set out this ‘Plan for England’, with the DIUS as its scribe. A shift in attitudes and aspiration was needed, the report claimed, ‘not only in Government, but also within workplaces,
schools, colleges, universities and society itself.\textsuperscript{69} The plan encourages employers and individuals to make a ‘major new investment of time, effort and money that far exceeds the Government’s direct contribution’\textsuperscript{70} in a ‘demand-led’ approach.\textsuperscript{71}

On 2\textsuperscript{nd} August, 2007, at the direction of the Minister for Employment Caroline Flint and Minister for Skills David Lammy, the ‘Employability Skills Programme’ was released. The Programme is a group initiative by the Department for Work and Pensions (DWP), Jobcentre Plus and the Learning and Skills Council (LSC), and the DIUS. The DIUS made a point of working on this particular project, in order to introduce a programme specifically designed to ‘help people improve their skills, find a job and progress at work’. Lammy stated that:

\begin{quote}
It is important that low-skilled unemployed people have access to flexible training which gives them the skills that employers value, to help them get jobs, and progress in work. The Employability Skills programme will provide this access and will be hugely important for people trapped by a lack of skills between dead-end jobs and periods of unemployment. By assessing people's needs based on their skills levels they can be given structured learning programmes tailored to their needs that help them secure sustainable employment.\textsuperscript{72}
\end{quote}
The Employability Skills programme has been designed as a ‘package of learning’ which provides basic skills, paired with employability qualifications. Jobcentre Plus customers have been promised chances to:

- Enhance their employability skills
- Improve their literacy, language and numeracy skills
- Secure and sustain employment
- Ensure that their learning journey continues and is supported once they gain employment [italics added for emphasis].

Another parody that demonstrates the government’s commitment to this set of policy rhetoric is the ‘World Skills’ competition. This event is held every two years and invites participants for 48 countries to compete on a variety of skills, which ‘range from Milinery to Mechatronics and Web Design to Welding’. The event gives young participants a chance to become ‘intensively trained by skilled mentors, thanks to the work of UK Skills’. The competition is immediately aligned with publicity for the ‘Our Future, it’s in our hands’ skills campaign initiative introduced in August 2007 as another response to Leitch:

*It’s in Our Hands* is bringing the skills debate into front rooms and gyms, canteens and workplaces and really making people sit up and take notice. And it’s a mark of the Government’s commitment to one of the most important
issues to face UK workers and businesses. But as we all know, the campaign will depend on many different partners all pulling together to achieve the same ambitions – increasing people’s confidence, their skills base, their earning power and crucially, encouraging people and employers to engage in learning (Smith 2007).

So, Liz Smith, the Director of Unionlearn, writes that ‘we all know’ that this campaign depends on all of us, and on our listening and ‘taking notice’, whether we are having this debate in our front room, at the gym, having lunch in the canteen, or in our very workplaces. The skills campaign is only going to work if it becomes part of ‘our’ day to day lives, and it is our responsibility as Marxist social scientists to think carefully and critically about the impact this will have in subsumption of our lives to capitalism.

**Conclusion**

Is this a story wreaked in ambivalence, and simply an obvious response to the process of overaccumulation in one developed, post-industrial nation? Or, is the employability campaign in the UK part of a rising tide of projects that accompany and define the managed expansion of neoliberal capitalism? Does the rhetoric associated with imposition of entrepreneurial lifelong learning personal projects demonstrate a return to the pre-industrial craft labourer for whom Marx felt nostalgia? Or, in the context of neoliberal globalisation, does it reveal national insecurities for the future of workplaces and the labour market, resulting in an emphasis of responsibilities onto workers for self management? Is the appropriation of the craft worker, seen in government and employer
ordained projects of workers’ required ‘learning’ result in increased colonisation of the everyday, in a scenario that requires the blending of productive man/woman with the political man/woman; in a relationship of renewed alienation? Is this campaign a characteristic intention toward increased colonisation of everyday lives?

An acute paradox is found within the reams of text available which informs education policy at the direction of the New Labour government whose policy has uncritically embraced EU encumbrances, and aggressively recommends a particular set of practices and duties for workers’ lifelong survival in the increasingly unstable world of work. Perhaps the current rhetoric of employability reflects the state’s fear of mass resistance such as was seen in the 1980s in response to Margaret Thatcher’s nearly complete destruction of manufacturing. Typically, management attempts to organise production in specific ways that they think will minimise the chance for resistance. New Labour’s employability campaign, in its rational and seemingly logical promotion of education and learning as intimately lined with work, and with the resultant blurring of productive with political man, is a case of colonisation of the everyday of people who continue the struggle for survival in the neoliberal capitalist world. The implication is that those individuals who are fortunate enough to find employment in a rapidly flexibilising job market would then be held directly responsible for not only their own employability project, coupled with the drive toward ‘lifelong learning’, but also will be responsible for the prosperity of their nation on the globally competitive stage.
However, this is not just an event exclusive to Britain. It has become clear that employability is an idea that has become almost a matter of common sense to inform policy making across different locations globally. Respective national skills revolutions have occurred at a similar pace, and over a similar period of time.\(^{75}\) This would not have surprised Meyer (et al),\(^{76}\) who note that despite distinct histories, organisations within varying nation-states appear to converge in more ways than they diverge. The objective nature of a dominant and somehow benevolent world culture would inevitably emerge from a desert island if given the chance. These sociologists admit that this world culture is a Western invention, with a limited admission for locally specific ways of expressing what he interprets to be global norms, and which these authors believe will be ultimately beneficial to all states. This claim supports a blind liberal internationalism.

Meyer is therefore not critical of the impact of related policy on the day to day lives of people who are most immediately impacted by any emerging convergence project. It is clear that Meyer and his colleagues celebrate convergence and assumes that it will be a Western-led project, whereas more recent research demonstrates the fallacy of this assumption.\(^{77}\) Different nations demonstrate different approaches to projects of capitalist development, but the impact seems to remain the same, that upon the most vulnerable, or workers. Harvey and Bowers-Brown\(^{78}\) have shown that while expectations placed on graduates may be similar across the world, various methods are attempted to ensure employability expectations will be met.
The implications of continued private involvement into the public sector supports a view toward continued retrenchment of a welfare state and in turn holds implications for workers and their own employment security in a country that has over time embraced a liberalisation and flexibilisation agenda with more gusto than any of its European neighbours. The Sector Skills Councils in particular have been implemented with a specific intention to manage the ‘failures’ of education to prepare an adequate labour force to suit contemporary market demands, with direct implications for citizen/workers today. This discussion brings the research into a contemporary framework of the Leitch Report, which places the UK into a global framework of skills development, and which challenges the government to invite the private sector to become more intimately involved with labour force preparation. What the Leitch Report means for the development of business/education relations and for the construction of a demand-side economy is still to be seen, but the report is very critical of the perceived employability of a workforce that has been insufficiently serviced by an education system that is now being dramatically restructured.

Lefebvre reminds us that the worker is a ‘whole’, but that ‘modern industrial labour both encloses and conceals the social character of all the work done in any one firm and the total labour in society (the growing socialisation of labour and the relations of production)’. It has been claimed here that workers and the relations of production that affect their lives are most often overlooked and this must be addressed in order to give a complete picture of modernisation of institutions within the public sector in the UK and the corresponding worker preparation, ‘employability’ campaign. Policymakers, business
figures and union representatives in the developed West have discussed the
transformation of what makes workers ‘employable’ after industrial revolutions have
apparently given way to knowledge revolutions, and have externalised responsibility
through reference to the ‘global’ as though space has also transformed to overcome any
remains of the local. At tripartite discussions between employers, unions, and
government representatives, leaders have attempted to shift responsibility for workers’
security in a number of ways, as is demonstrated in unprecedented training initiatives.
The insecurity and limited measurability of the globalised playing field have inspired
governments to shift responsibility for workers’ welfare to workers themselves, by way
of the explicit creation of educational environments aimed to train workers toward a new
genre of individual employability or entrepreneurialism of the self, which in effect allows
ongoing retrenchment of the welfare state. The danger is, as well, that this kind of state
activity can been aligned with other forms of repression and the constant expansion of
everyday surveillance and intrusions into everyday life such as anti-terrorism measures
that begin to increasingly invade into such activities as peaceful protest.

However, Lefebvre also conjures everyday life in a depiction of ‘fertile soil’. He notes
that a ‘landscape without flowers or magnificent woods may be depressing for the passer-
by’; the landscape being a metaphor for the generally perceived view of everyday life.
‘Flowers and trees should not make us forget the earth beneath, which has a secret life
and a richness of its own’. 80 This optimism may allude to the richness of possibilities for
resistance to such campaigns which gradually appear to dominate the micro-regularities
of workers’ everyday lives.
My thanks go to anonymous policy advisors at the Sector Skills Development Agency who met with me for discussions/interviews on the 9th – 11th May 2007 in South Yorkshire at their Headquarters.

7 This is seen in a collaborative Employability Skills Programme, which includes an ‘Employability Award’ that is granted to lucky Jobcentre Plus ‘customers’ who can demonstrate ‘the skills, behaviours and attitudes that employers want to see in someone they recruit’ Department for Work and Pensions ‘New employability skills programme to help people back into work’ 1 August 2007, http://www.gnn.gov.uk/Content/Detail.asp?ReleaseID=304329&NewsAreaID=2 (accessed 19 September 2007).

Typically, in cases of increasing unemployment, as is happening in the UK, the state will pay for training, and if a company refuses to pay for training generally the state may impose increased taxes onto the company as an incentive to cooperate. In 2007, there are two industrial boards in the UK that place a training levy onto the sectors of construction, and engineering. A third levy is predicted as well, which will be imposed within the film industry in order to maintain talent in the huge media companies such as the BBC, Sky, and Granada, which rely on microbusinesses for talent and only make voluntary contributions to the Sector Skills Council. The Train to Gain programme was not completely providing the skills needed within this sector, so the question of information regarding what is needed in terms of skills, as well as a clear message for who is paying for what training, needs to be made clear. Otherwise, the danger is that the costs fall onto individuals to maintain a personal project for employability, which functions to place increased responsibilities onto workers rather than provide safety nets in the increasingly unstable job market.
