Comment: Small waterbodies are easier to restore and improve ecological status rather than focussing on main river.

Comment: Projects which meet WFD objectives may also meet UK BAP targets and climate change adaptation requirements.

Comment – The Douglas catchment needs to be included in Ribble boundary for its impact on bathing waters.

Comment – Actions that make the removal of obsolete weirs permanent or more difficult to remove should not be promoted or supported.

Waste to land around Plocks Farm and other nearby areas is impacting on WFD in the Douglas.

Himalayan Balsam should be removed at the top of the Ribble primarily to prevent seeds spreading downstream. Good opportunity for communities to get involved.

White clawed crayfish distribution and protection including invasive species control project.

South Fylde Drains – work with landowners and stakeholders to give land management advice including leaving buffer strips, farm cultivation, herbicide, ploughing to protect ecology and water quality. N.B This is an idea as the South Fylde Drains are a discreet system and should not be low priority.

The Douglas catchment needs to be included in the pilot area as there are a large number of combined sewer overflows and pumping stations along the river which could be contributing to WFD.

Septic tanks are an issue in the Douglas and contributing to WFD.

Hesketh saltmarsh creation to create carbon storagelfish habitat and improve biodiversity.

Habitat improvements at the bottom of the Ribble along Guild wheel cycle track - wet woodland/etc and ponds. This would be a good opportunity to get involved in Preston guild and would target WFD and BAP objectives.

Moss sampling for cypermethrin (sheep parasite treatment) which we have detected on the River Loud, Stock Beck and Skirden Beck.

Employ an invasive species liaison officer that sits within the Ribble catchment conservation officer. They could work on the location of invasive species and the cost of eradication.

RCCT/Fisheries ongoing project (habitat restoration) on Stock Beck.

White Ash Brook coal mine – we need to work with the coal authority to make this mine more of a priority than it is currently.

The Douglas catchment needs to be included in the pilot area as there are a large number of combined sewer overflows and pumping stations along the river which could be contributing to WFD.

South Fylde Drains – work with landowners and stakeholders to give land management advice including leaving buffer strips, farm cultivation, herbicide, ploughing to protect ecology and water quality.
