

BHS2022 Posters by session

This table sorts posters by one pertinent session number (with colours showing theme). Please note that some posters are pertinent to multiple sessions:

Theme 1: Future hydrology	Theme 4: Ecohydrology & water quality
Theme 2: Floods & droughts	Theme 5: International hydrology
Theme 3: Natural flood management & partnership working	

Session	Poster board #	Poster Title	Presenter and other authors	ID
0	68	BHS Equality, Diversity and Inclusion	Emily Fowler	186
0	69	BHS Governance 1 of 2	Chris Skinner	108
0	70	BHS Governance 2 of 2	Chris Skinner	168
2	6	River Based Livelihood In a Changing Environment: A Case Study of the Niger River In Nigeria.	Cyril Effiong, (1) David Hannah, (2) Fraser Sugden	21
2	65	Community response to the November 2017 flood in Galgate, Lancashire	Dr. Ann Kretzschmar	180
3	2	Monitoring and modelling of leaky barriers on the River Bourne - Landwise NFM	Ryan Jennings	11
3	11	Subsoiling as an agricultural management method for Natural Flood Management	Tamsin Lockwood	32
3	12	Can hydrochemical tracers better constrain the models we use to predict change with NFM?	Sarah Collins	33
3	13	Conceptual rainfall runoff modelling to assess the impact of natural flood management solutions.	Anthony Hammond	36
3	19	LANDWISE: evaluating the potential for land use and land management NFM	Emily Trill (1), James Blake (2), Joanna Clark (3), John Robotham (4), Peter Scarlett (5), Ponnambalam Rameshwaran (6), Gareth Old (7)	52
3	27	SMART Monitoring for evidence based NFM in Slaithwaite-Kirklees	Gerbren Haaksma (1) Dr Namrata Bhattacharya Mis (2) Dr Serval Miller (3)	88
3	28	Quantification of runoff response in NFM micro-basins - using time constants to compare runoff responses in both time and space	David Mindham	89
3	29	Monitoring NFM in the Evenlode Catchment: Evidence on the delivery of multiple benefits	John Robotham (1); Emily Trill (2); James Bishop (3); Gareth Old (4); Ponnambalam Rameshwaran (5); David Sear (6)	93
3	32	Innovative nested modelling of Natural Flood Management and large traditional storage in the Ouse	Eleanor Pearson	99
3	33	Model-led design of Natural Flood Management measures increases their efficacy	Eleanor Pearson	100
3	34	Quantifying Runoff Attenuation Feature (RAF) performance through detailed drone DEM survey.	Ryan Jennings	104
3	36	Assessing the use of ponds to deliver multiple benefits in a medium-sized, lowland catchment	Jessica Webb	106
3	37	Development and validation of a method quantifying engineered logjams using a common physical metric	Joshua Little	119
3	41	Assessing the use of ponds to deliver multiple benefits in a medium-sized, lowland catchment	Jessica Webb	127
3	43	Development and validation of a method quantifying engineered logjams using a common physical metric	Joshua Little	136
3	48	Instream dynamics of leaky barriers used in natural flood management	Elizabeth Follett (1), Valentine Muhawenimana (2), Ian Maddock (3), Catherine Wilson (4)	151
3	52	Assessing the impacts of Natural Flood Management at a larger catchment scale	Qiuyu Zhu	157
3	62	Sedimentation of the Great Ouse Tidal River and implications for flood risk management	Edward Fleming	175

4	42	Linking the relative importance of input uncertainties of a flood risk model with basin characteristics.	Georgios Sarailidis '(1)', Francesca Pianosi '(2)', Thorsten Wagener '(3)', Rob Lamb '(4)', Kirsty Styles '(5)', Stephen Hutchings '(6)'	133
4	45	Climate gentrification: Valuing perceived risks in property prices	Josh Thompson	139
4	63	A Conceptual Causality Framework for flooding and drought risk	Siavash Fasihi	176
5	4	Updating the interim national guidance on non-stationary fluvial flood estimation for NRFA v10	Katie Muchan	18
5	9	The challenges of flood frequency estimation in groundwater-dominated catchments	Duncan Faulkner (1) Clare Waller (2)	25
5	15	A New Open Spatiotemporal Weather Generator	David Pritchard	41
5	18	Climate change impact on hydrological extremes across Great Britain	Rosie Lane (1), Alison Kay (2)	51
5	25	Regional Climate Data Tools in Industry: comparisons between UKCP18 and stochastic droughts	Samantha Leader	75
5	44	Building Storylines of Future Catchment Hydrology	Dr. Helen Griffith	138
5	59	How do flashy catchments respond to changes in rainfall profile shape?	Alexandra Seawell	171
6	7	Screening tool for dam safety in countries without established flood estimation procedures	Duncan Faulkner	22
8	22	A framework to assess the impact of flooding on the release of microplastics from waste management facilities	Marta Ponti	65
8	47	Climatic Influences on Spatio-Temporal Variation of Suspended Sediment Dynamics in Rivers	Jae hun Shin	147
8	50	Comparison and integration of UK soil moisture data products	Michael Tso	154
8	66	Managing water levels for protected species - a case study with Common scoter	Naveed Bhatti	182
10	8	Whatever happened to April showers?	Duncan Faulkner	23
10	21	Understanding the vulnerabilities of Scotland's water resources to drought	Shaini Naha	60
10	23	Projected future flows for the North-West of England	Susana Almeida (1), Neil Upton (2), Steven Wade (1), Sam Leader (1), Rob Tothill (1)	73
10	24	Stochastic weather generation for water resources and drought modelling	Lauren Petch	74
10	26	Peer reviewed publications overlook novel thinking: the role of grey literature in systematic review	Mason Durant (1) Chris Counsell (2) Fai Fung (3) Rob Wilby (4)	84
10	39	Model evaluation approaches for constraining uncertainty in projected drought changes.	Geoff Darch (1), Nele Reyniers (2), Nans Addor (3), Timothy Osborn (4)	123
11	40	Flood event analysis for the Mersey, Severn and Derbyshire Derwent catchments (February 2022)	Donna Wilson (1), Katie Muchan (2), Clare Waller (3), Tracey Ashworth (4), Sarah Marseglia (5) Bethan Flynn (6)	124
11	53	Reducing uncertainty in heavy rainfall forecasts used to support flood modelling warning systems	Vivian Camacho Suarez	159
12	46	Assessing the geomorphic and peak flow lag time responses to leaky barriers in an upland stream. A three-year case study.	Stephen Addy (1), Mark E. Wilkinson (2)	145
12	49	Baseflow and hydrograph comparisons in a data-sparse mountainous rewilding catchment	Andrew Black	153
12	56	Upstream Downstream - Quantifying the Effectiveness of Leaky Dams to Reduce Flood Risk	Phil Wadley (1), Nick Chappell (1)	163
12	64	Modelling catchment scale hydrological effects of landscape rewilding.	Adam Threlfall Hartley	178
12	67	The hydrological highs and lows of landscape rewilding	Gemma Harvey	183
13	58	The Scottish Flood Forecast, a new three day flooding outlook for the public	Richard Maxey	170

14	1	Patterns between different seasons' recession curves held on the UK National River Flow Archive	Dr Nick Mandeville	7
14	5	Cataloguing extreme events: evidence that probable maximum estimates need revising	Clare Waller (1) Duncan Faulkner (2) Irina Rohrmueller (3) Kay Shelton (4)	19
14	10	Sensitivity of Probable Maximum Flood to snowmelt method at Environment Agency reservoirs	James Molloy (1), Clare Waller (2), Kirstie Murphy (3)	27
14	55	A rapid method for estimating the critical duration event in ReFH.	Daniel Hamilton (1), Tracey Haxton (2)	161
14	61	How useful are gridded water resources reanalysis for assessing water security in ungauged basins?	Dr Elias Nkiaka	173
