| Name of Product / Version | KxB&B — release 2026.2.0.0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Product Description       | Web-based accommodation sales and booking platform comprising a public, client-branded booking website (search, room/advert selection, basket, account and booking management) and an administrative portal for managing adverts, availability, bookings and configuration.                                                                                                                                                                                                                                                                                                                                                                        |
| Report Date               | 28 August 2026                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Evaluation Methods Used   | Manual inspection of source and rendered markup; browser accessibility-tree (DOM) inspection; live computed-style contrast measurement (relative-luminance formula) directly against rendered colours; genuine 320px-viewport reflow testing via a same-origin nested browsing context (not stylesheet inspection alone); real dispatched-keyboard-event testing (e.g. Escape); keyboard-only operation; build verification of the release branch (2026.2.0.0); and cross-reference against remediated WCAG defect tickets across QA retest cycles 1 through 3. Evaluation performed against the reference "Kinetic" client on a local deployment. |
| Contact Information       | Kinetic Solutions Ltd — Product team                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Notes                     | Covers WCAG 2.2 Levels A and AA. Level AAA is out of scope. Third-party payment-gateway pages and per-client bespoke templates/CSS are out of scope.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

### Applicable Standards / Guidelines

|                      |                                                 |
|----------------------|-------------------------------------------------|
| Standard / Guideline | Web Content Accessibility Guidelines (WCAG) 2.2 |
| Levels included      | Level A — Yes; Level AA — Yes; Level AAA — No   |

### Terms

The terms used in the Conformance Level column are defined as follows:

- Supports — the functionality meets the criterion without known defects, or with equivalent facilitation.
- Partially Supports — some functionality does not meet the criterion.
- Does Not Support — the majority of functionality does not meet the criterion.
- Not Applicable — the criterion is not relevant to the product.

### WCAG 2.2 Report

Table 1: Success Criteria, Level A

| Criteria                                          | Conformance Level | Remarks and Explanations                                                                                                    |
|---------------------------------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 1.1.1 Non-text Content (A)                        | Supports          | Logos and meaningful images provide text alternatives; decorative icons are hidden from assistive technology (aria-hidden). |
| 1.2.1 Audio-only and Video-only (Prerecorded) (A) | Not Applicable    | The product contains no pre-recorded audio-only or video-only content.                                                      |
| 1.2.2 Captions (Prerecorded) (A)                  | Not Applicable    | No available media format has a video player that supports closed captioning.                                               |

| Criteria                                                              | Conformance Level     | Remarks and Explanations                                                                                                                                                                                               |
|-----------------------------------------------------------------------|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.2.3 Audio Description or Media Alternative (Prerecorded) (A)</b> | <b>Not Applicable</b> | No functionality implemented that uses audio or video (Revised Section 508 — does not apply).                                                                                                                          |
| <b>1.3.1 Info and Relationships (A)</b>                               | <b>Supports</b>       | Remediated and live-verified, admin data-grid column headers now render as <th scope> with correct header/data association, clearing the last outstanding gap; client label/field associations were already compliant. |
| <b>1.3.2 Meaningful Sequence (A)</b>                                  | <b>Supports</b>       | Reading and navigation order in the DOM matches the visual presentation.                                                                                                                                               |
| <b>1.3.3 Sensory Characteristics (A)</b>                              | <b>Supports</b>       | Instructions do not rely solely on shape, size, visual location, or sound.                                                                                                                                             |
| <b>1.4.1 Use of Color (A)</b>                                         | <b>Supports</b>       | Following remediation, form errors are conveyed with text and not by colour alone.                                                                                                                                     |
| <b>1.4.2 Audio Control (A)</b>                                        | <b>Not Applicable</b> | No audio content found in Admin or User Interface.                                                                                                                                                                     |
| <b>2.1.1 Keyboard (A)</b>                                             | <b>Supports</b>       | All functionality is operable by keyboard; the admin navigation menu, previously mouse-only, is now keyboard operable.                                                                                                 |
| <b>2.1.2 No Keyboard Trap (A)</b>                                     | <b>Supports</b>       | The previously reported keyboard trap on the date picker and "Add Room(s)" control has been resolved; focus can always be moved away using standard keys.                                                              |
| <b>2.1.4 Character Key Shortcuts (A)</b>                              | <b>Not Applicable</b> | No single-character key shortcuts are implemented.                                                                                                                                                                     |
| <b>2.2.1 Timing Adjustable (A)</b>                                    | <b>Supports</b>       | Users are warned before session timeout via an accessible dialog with a live countdown and can extend the session ("Stay signed in"); warning lead time is configurable.                                               |
| <b>2.2.2 Pause, Stop, Hide (A)</b>                                    | <b>Supports</b>       | No auto-updating, blinking, scrolling or moving content outside user control.                                                                                                                                          |
| <b>2.3.1 Three Flashes or Below Threshold (A)</b>                     | <b>Not Applicable</b> | No content flashes; not applicable.                                                                                                                                                                                    |
| <b>2.4.1 Bypass Blocks (A)</b>                                        | <b>Supports</b>       | Skip links and ARIA landmarks (banner/navigation/main/contentinfo) are provided on both the client site and the admin portal.                                                                                          |
| <b>2.4.2 Page Titled (A)</b>                                          | <b>Supports</b>       | Every page has a unique, descriptive title; client pages that share a brand title are disambiguated with a page-name prefix.                                                                                           |
| <b>2.4.3 Focus Order (A)</b>                                          | <b>Supports</b>       | Focus order follows a logical, meaningful sequence; the admin menu focus flow has been corrected.                                                                                                                      |
| <b>2.4.4 Link Purpose (In Context) (A)</b>                            | <b>Supports</b>       | Links are descriptive in context.                                                                                                                                                                                      |
| <b>2.5.1 Pointer Gestures (A)</b>                                     | <b>Not Applicable</b> | No multipoint or path-based gestures are required (Revised Section 508 — does not apply).                                                                                                                              |
| <b>2.5.2 Pointer Cancellation (A)</b>                                 | <b>Supports</b>       | Actions complete on the up-event; no down-event triggers an irreversible action.                                                                                                                                       |
| <b>2.5.3 Label in Name (A)</b>                                        | <b>Supports</b>       | Visible labels are contained in the accessible name of controls; form labels are programmatically associated and the "Number of rooms/flats" label matches its accessible name.                                        |
| <b>2.5.4 Motion Actuation (A)</b>                                     | <b>Not Applicable</b> | No functionality is operated by device motion (Revised Section 508 — does not apply).                                                                                                                                  |

| Criteria                         | Conformance Level | Remarks and Explanations                                                                                                                                                    |
|----------------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.1.1 Language of Page (A)       | Supports          | Each page declares its language via the lang attribute on the html element.                                                                                                 |
| 3.2.1 On Focus (A)               | Supports          | Receiving focus does not trigger an unexpected change of context.                                                                                                           |
| 3.2.2 On Input (A)               | Supports          | The language selector applies the selected language only when the explicit "Change" button is activated;                                                                    |
| 3.2.6 Consistent Help (A)        | Not Applicable    | Revised Section 508 — does not apply.                                                                                                                                       |
| 3.3.1 Error Identification (A)   | Supports          | Input errors are identified and described in text and associated with the field in error, replacing prior colour-only / generic feedback.                                   |
| 3.3.2 Labels or Instructions (A) | Supports          | Labels and instructions are provided where content requires user input.                                                                                                     |
| 3.3.7 Redundant Entry (A)        | Supports          | Previously entered information is not re-requested unnecessarily across the booking flow.                                                                                   |
| 4.1.1 Parsing (A)                | Supports          | This criterion was removed in WCAG 2.2; rated Supports as always satisfied.                                                                                                 |
| 4.1.2 Name, Role, Value (A)      | Supports          | The admin and client language-selector control now exposes its own accessible name, independent of the "Change" button which itself exposes "Change site language". Closed. |

**Table 2: Success Criteria, Level AA**

| Criteria                                   | Conformance Level | Remarks and Explanations                                                                                                                                                                                                                                                          |
|--------------------------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.2.4 Captions (Live) (AA)                 | Not Applicable    | No live synchronised media.                                                                                                                                                                                                                                                       |
| 1.2.5 Audio Description (Prerecorded) (AA) | Not Applicable    | No pre-recorded synchronised media.                                                                                                                                                                                                                                               |
| 1.3.4 Orientation (AA)                     | Supports          | Content is responsive and not restricted to a single display orientation; verified via responsive viewport meta and absence of any orientation-lock API. Admin is desktop-only (Not Applicable there) but imposes no orientation restriction.                                     |
| 1.3.5 Identify Input Purpose (AA)          | Supports          | Title, County and Country now carry correct autocomplete tokens on the booking booker form and Signup. Closed.                                                                                                                                                                    |
| 1.4.3 Contrast (Minimum) (AA)              | Supports          |                                                                                                                                                                                                                                                                                   |
| 1.4.4 Resize Text (AA)                     | Supports          | Text can be resized to 200% without loss of content or function.                                                                                                                                                                                                                  |
| 1.4.5 Images of Text (AA)                  | Supports          | Text is presented as real text except for logos.                                                                                                                                                                                                                                  |
| 1.4.10 Reflow (AA)                         | Supports          |                                                                                                                                                                                                                                                                                   |
| 1.4.11 Non-text Contrast (AA)              | Supports          | Form-control and DevExpress editor borders now measure #808080 (3.95:1) or darker on Admin; client .form-control and checkbox borders use the shared design token --kx-color-border-form-control, confirmed set to #767676 (4.54:1) at the document root and applying theme-wide. |
| 1.4.12 Text Spacing (AA)                   | Supports          | No loss of content or function when user text-spacing overrides are applied.                                                                                                                                                                                                      |
| 1.4.13 Content on Hover or Focus (AA)      | Supports          |                                                                                                                                                                                                                                                                                   |

| Criteria                                             | Conformance Level | Remarks and Explanations                                                                                                                                                                |
|------------------------------------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.4.5 Multiple Ways (AA)                             | Supports          |                                                                                                                                                                                         |
| 2.4.6 Headings and Labels (AA)                       | Supports          |                                                                                                                                                                                         |
| 2.4.7 Focus Visible (AA)                             | Supports          | Keyboard focus is visible on all interactive controls, verified via real-keyboard testing.                                                                                              |
| 2.4.11 Focus Not Obscured (Minimum) (AA)             | Supports          | A focused element is not entirely hidden by author-created sticky content.                                                                                                              |
| 2.5.7 Dragging Movements (AA)                        | Supports          |                                                                                                                                                                                         |
| 2.5.8 Target Size (Minimum) (AA)                     | Supports          | Sortable header cells in both the DataTables and DevExpress ASPxGridView grids now clear the 24px minimum. Client-side targets were already confirmed adequate via surrounding spacing. |
| 3.1.2 Language of Parts (AA)                         | Supports          | Content is presented in a single language per rendered culture; language switching re-renders the whole page.                                                                           |
| 3.2.3 Consistent Navigation (AA)                     | Supports          | Navigation is presented consistently via shared master pages.                                                                                                                           |
| 3.2.4 Consistent Identification (AA)                 | Supports          | Components with the same functionality are identified consistently.                                                                                                                     |
| 3.3.3 Error Suggestion (AA)                          | Supports          | Where an input error is detected and a correction is known, a suggestion is provided in text (e.g. "Maximum guests cannot be less than minimum guests.").                               |
| 3.3.4 Error Prevention (Legal, Financial, Data) (AA) | Supports          | A booking confirmation step allows review, correction and cancellation before any financial commitment.                                                                                 |
| 3.3.8 Accessible Authentication (Minimum) (AA)       | Supports          | Login uses username/password with no cognitive-function test; password entry supports paste and no CAPTCHA blocks the flow.                                                             |
| 4.1.3 Status Messages (AA)                           | Supports          | Status messages (e.g. the session-timeout warning, inline validation feedback) are programmatically exposed via role=alertdialog/alert/status as appropriate.                           |

## Summary

Following remediation and three cycles of QA retest, KxB&B Supports every in-scope WCAG 2.2 Level A and AA success criterion.
