User information

Built-in oven
Thank you for selecting our appliance

We wish you lots of enjoyment with your new appliance and we hope that you will consider our brand again when purchasing household appliances. Please read this user manual carefully and keep it throughout the product life cycle as a reference document. The user manual should be passed on to any future owner of the appliance.

Guide to using the user instructions

⚠️ Safety instructions

👉 Step by step instructions

💡 Hints and Tips

This appliance conforms with the following ECC Directives:
- 2006/95 (Low Voltage Directive);
- 89/336 (EMC Directive);
- 93/68 (General Directive);
and subsequent modifications.
Important Safety Information

These warnings are provided for the safety of the users and those living with them. So read them carefully before installing and using the appliance. This will allow you to obtain best performance, avoid improper actions, use the appliance in complete safety and also respect the environment.

If you need assistance, contact our Customer Care Department on 08705 727 727

Installation

- This oven must be installed by qualified personnel to the relevant British Standards.
- This oven is heavy. Take care when moving it.
- Remove all packaging, both inside and outside the oven, before using the oven.
- Do not attempt to modify the oven in any way.

During use

- This oven is intended for domestic cooking only. It is not designed for commercial or industrial purposes.
- Always stand back from the oven when opening the oven door during cooking or at the end of it to allow any build up of steam or heat to release.
- Appliances become very hot with use, and retain their heat for long periods after use. Care should be taken to avoid touching heating elements inside the oven.
- Never line any part of the oven with aluminium foil.
- Do not allow heatproof cooking material, e.g. roasting bags, to come into contact with oven elements.
- Never place plastic or any other material which may melt in or on the oven.
- Do not place sealed cans or aerosols inside the oven. They may explode if they are heated.
- Do not hang towels, dishcloths or clothes from the oven or its handle.
- Do not use this oven if it is in contact with water and never operate it with wet hands.
- Take great care when heating fats and oils as they will ignite if they become too hot.
- Always use oven gloves to remove and replace food in the oven.
- Before cleaning the oven, either turn the power off or pull the mains plug out.
- Ensure that all controls are in the OFF position when not in use.
- Do not leave cookware containing foodstuffs, e.g. fat or oil in or on the oven in case it is inadvertently switched ON.
- When using other electrical appliances, ensure the cable does not come into contact with the hot surfaces of the oven.
People Safety

- This oven is designed to be operated by adults. Do not allow children to play near or with the oven.
- The oven gets hot when it is in use. Children should be kept away until it has cooled.
- This appliance is not intended for use by children or other persons whose physical, sensory or mental capabilities or lack of experience and knowledge prevents them from using the appliance safely without supervision or instruction by a responsible person to ensure that they can use the appliance safely.

Maintenance and Cleaning

- Only clean this oven in accordance with the instructions.
- Always allow the oven to cool down and switch off the electrical supply before carrying out any cleaning or maintenance work.
- The oven should be kept clean at all times. A build-up of fats or other foodstuffs could result in a fire, especially in the grill pan.
- Never use steam or high pressure steam cleaners to clean the appliance.
- Do not use abrasive cleaners or sharp metal scrapers. These can scratch the glass in the oven door, which may result in the shattering of the glass.

Service

- This oven should only be repaired or serviced by an authorised Service Engineer and only genuine approved spare parts should be used.

Environmental Information

- After installation, please dispose of the packaging with due regard to safety and the environment.
- When disposing of an old appliance, make it unusable, by cutting off the cable. Remove any door catches, to prevent small children being trapped inside.

The symbol on the product or on its packaging indicates that this product may not be treated as household waste. Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product.

For more detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

Always keep these user instructions with the appliance. Should the appliance be passed on to third persons or sold, or if you leave this appliance behind when you move house, it is very important that the new user has access to these user instructions and the accompanying information.

Controls

Oven Function Control Knob

0  The oven is off

☀ Oven light - The oven light will be on without any cooking function.

❄ Defrost Setting - This setting is intended to assist in thawing of frozen food.

🔥 Fan cooking - This allows you to roast or roast and bake simultaneously using any shelf, without flavour transference.

☒ Grill - The heat comes from the top element only.

Mains on Indicator

The mains on light will come on when the oven function control knob is set.

Thermostat Control Knob

Turn the thermostat control knob anti-clockwise to select temperatures between 50°C and 250°C.

Thermostat Control Indicator

The thermostat control indicator will come on when the thermostat control knob is turned. The indicator will remain on until the correct temperature is reached. It will then cycle on and off to show the temperature is being maintained.
Safety Thermostat
To prevent dangerous overheating (through incorrect use of the appliance or defective components), the oven is fitted with a safety thermostat, which interrupts the power supply. The oven switches back on again automatically, when the temperature drops.
Should the safety thermostat trigger due to incorrect use of the appliance, it is enough to remedy the error after the oven has cooled down; if on the other hand, the thermostat triggers because of a defective component, please contact Customer Service.

The cooling fan
The cooling fan is designed to cool the the oven and the control panel. The fan switches on automatically after a few minutes of cooking. Warm air is blown out through the aperture near the oven door handle. When the oven is switched off, the fan will remain on in order to cool the oven and kitchen cabinets properly, after which it switches off automatically.

Before using the oven for the first time
Remove all packaging, both inside and outside the oven, before using the oven.
Before using for the first time, the oven should be heated up without food.
During this time, an unpleasant odour may be emitted. This is absolutely normal. It is caused by manufacturing residues.
Ensure the room is well ventilated.

1. Switch the oven function control knob to fan cooking.
2. Set the thermostat control knob to 250°.
3. Open a window for ventilation.
4. Allow the oven to run empty for approximately 45 minutes.
This procedure should be repeated with the full grill function for approximately 5-10 minutes.

To open the oven door, always hold the handle in the centre.

Then let the oven cool down. Then dampen a soft cloth with warm water and a little mild washing-up liquid and use this to clean the oven cavity.
Before using for the first time, carefully wash the oven accessories as well.
Electronic programmer

1. Push button for selecting a function
2. Decreasing control button “—”
3. Increasing control button “+”
4. Display
5. “Cooking Duration” pilot lamp
6. “End of cooking” pilot lamp
7. “Minute minder” pilot lamp
8. “Time of day” pilot lamp

The oven will only work if the time of day has been set.
However, the oven can also be operated without any programme.

Setting the time of day

When the power supply is switched on, or after a power failure, the “Time of day” pilot lamp will flash on the display.

To set the correct time of day:
1. Press button “+” or “—”.
2. After the setting is carried out, wait for 5 seconds: the “Time of day” pilot lamp will go out and the display will show the set time.
   The appliance is ready for use.

To reset the correct time of day:
1. Press button repeatedly to select the “Time of day” function. The relevant pilot lamp will start flashing. Then proceed as described above.
   The time of day can only be reset if no automatic function (cooking duration or end of cooking) has been set.

In the event of a power failure, all the settings (time of day, programme setting or programme in operation) will be cancelled. When the power is restored, the numbers in the display will flash, and the clock/timer has to be reset.
“Cooking Duration” function

This function allows the oven to automatically switch off at the end of a programmed cooking duration time. Place food in the oven, select a cooking function and adjust the cooking temperature. Press button repeatedly to select the “Cooking Duration” function. The relevant pilot lamp will start flashing. Then, proceed as follows:

**To set the duration time:**
1. Press button “+” or “-”.
2. After the setting is carried out, wait for 5 seconds: the "Cooking Duration" pilot lamp will come on and the display will revert to the time of day.
3. When cooking time is over, the oven will be switched off automatically and an acoustic alarm will be heard, while the pilot lamp will start flashing. Turn the oven function and the thermostat control knob to zero.
   To switch off the acoustic alarm, press any button.
   **NOTE:** turning the acoustic alarm off will reset the oven to manual, and if the oven function and the thermostat knobs are not set to zero the oven will start to heat again.

**To cancel the duration time:**
1. Press button repeatedly to select the “Cooking Duration” function. The relevant pilot lamp will flash and the display will show the remaining cooking time.
2. Press button “-” until the display shows “0:00”. After 5 seconds the pilot lamp will go out and the display will revert to the time of day.
“End of cooking” function →|

With this function, you can set the oven to switch off automatically when a programmed end of cooking time is over. Place food in the oven, select a cooking function and adjust the cooking temperature. Press button repeatedly to select the “End of cooking” function. The relevant pilot lamp will start flashing. Then, proceed as follows:

To set the End of cooking time:
1. Press button “+” or “−”.
2. After the setting is carried out, wait for 5 seconds: the “End of cooking” pilot lamp will come on and the display will revert to the time of day.
3. When cooking time is over, the oven will be switched off automatically and an acoustic alarm will be heard, and the pilot lamp will start flashing. Turn the oven function and the thermostat control knob to zero.

To switch off the acoustic alarm, press any button. NOTE: turning the acoustic alarm off will reset the oven to manual, and if the oven function and the thermostat knobs are not set to zero the oven will start to heat again.

To cancel the End of cooking time:
1. Press button repeatedly to select the “End of cooking” function. The relevant pilot lamp will flash and the display will show the programmed End of cooking time.
2. Press button “−” until the display shows the current time of day. The programmer will beep and the pilot lamp will go out.

“Cooking duration” →| and “End of cooking time” →| combined

The functions “Cooking duration” and “End of cooking time” can be used simultaneously to set the oven to switch on and off automatically at a later time.
1. With the “Cooking duration” function (carry out the cooking duration setting as described in the relevant chapter) set the duration time. Then, press button : the display will show the programmed setting.

2. With the “End of cooking time” function (carry out the End of cooking setting as described in the relevant chapter) set the end of cooking time. The relevant pilot lamps will come on and the display will show the time of day. The oven will switch on and off according to the set programmes.

“Minute minder” function 

The minute minder alarm will sound at the end of a timed period, but the oven will remain on, if it is in use.

To set the minute minder:
1. Press button repeatedly to select the “Minute minder” function. The relevant pilot lamp will start flashing.
2. Then, press button “+” or “−” (maximum: 2 hours, 30 minutes).
3. After the setting is carried out, wait for 5 seconds: the “Minute minder” pilot lamp will come on.
4. At the end of the timed period, the pilot lamp will start flashing and an acoustic alarm will be heard. To switch off the acoustic alarm, press any button.

To cancel the minute minder:
1. Press button repeatedly to select the “Minute minder” function. The relevant pilot lamp will flash and the display will show the remaining time.
2. Press button “−” until the display shows “0:00”. After 5 seconds the pilot lamp will go out and the display will revert to the time of day.
How to switch off the display

1. Press two programmer push buttons simultaneously and keep them pressed for about 5 seconds. The display will switch off.

2. To switch on the display, press any button.

The display can be switched off only if no other functions have been set.
Using the oven

The oven is supplied with an exclusive system which produces a natural circulation of air and the constant recycling of steam.

This system makes it possible to cook in a steamy environment and keep the dishes soft inside and crusty outside. Moreover, the cooking time and energy consumption are reduced to a minimum. During cooking steam may be produced which can be released when opening the oven door. This is absolutely normal.

However, always stand back from the oven when opening the oven door during cooking or at the end of it to allow any build up of steam or heat to release.

Attention! - Do not place objects on the oven base and do not cover any part of the oven with aluminium foil while cooking, as this could cause a heat build-up which would affect the baking results and damage the oven enamel. Always place pans, heat-resisting pans and aluminium trays on the shelf which has been inserted in the shelf runners. When food is heated, steam is created, like in a kettle. When the steam comes into contact with the glass in the oven door, it condenses and creates water droplets.

To reduce condensation, always preheat the empty oven for 10 minutes.

We recommend you wipe the water droplets away after every cooking process.

Always cook with the oven door closed. Stand clear when opening the drop down oven door. Do not allow it to fall open - support the door using the door handle, until it is fully open.

The oven has four shelf levels. The shelf positions are counted from the bottom of the oven as shown in the diagram.

It is important that these shelves are correctly positioned as shown in the diagram.

Fan Cooking

The air inside the oven is heated by the element around the fan situated behind the back panel. The fan circulates hot air to maintain an even temperature inside the oven.

The advantage of cooking with this function is energy saving through:

- Faster Preheating
  As the fan oven quickly reaches temperature, it is not usually necessary to preheat the oven although you may find that you need to allow an extra 5-7 minutes on cooking times. For recipes which require higher temperatures, best results are achieved if the oven is preheated first, e.g. bread, pastries, scones, souffles, etc.

- Lower Temperatures
  Fan oven cooking generally requires lower temperatures than conventional cooking. Follow the temperatures recommended in the
cooking chart. Remember to reduce temperatures by about 20-25°C for your own recipes which use conventional cooking.

- **Even Heating for Baking**
  The fan oven has uniform heating on all shelf positions. This means that batches of the same food can be cooked in the oven at the same time. However, the top shelf may brown slightly quicker than the lower one. This is quite usual. There is no mixing of flavours between dishes.
  - Shelf positions are not critical, but make sure the shelves are evenly spaced.
  - When cooking more than one dish in the fan oven, place dishes centrally on the shelves rather than several dishes on one shelf.
  - When the oven is full, you may need to allow slightly longer cooking time.
  - When the oven is full of the same food, e.g. equal trays of small cakes or equal size victoria sandwich cakes, then they will be cooked in the same time and removed from the oven together. When different sizes of trays or types of food, e.g. biscuits and cakes are cooked, they will not necessarily be ready together.
  - The fan oven can be used to heat foods through without thawing first, e.g. fruit tarts, mince pies, sausage rolls, and other small pastry items. Use a temperature of 190-200°C and allow 20-40 minutes (depending on the quantity of food in the oven).
  - The use of too high temperatures can cause uneven browning. Check with the recommendations for oven temperatures given in the cooking charts, but be prepared to adjust the temperature, if necessary. Remember to reduce temperatures by about 20-25°C for your own conventional recipes.
  - When roasting do use the trivet in the meat tin. Fat and meat juices will drain into the meat tin below and can be used to make gravy. The trivet also prevents splashes of fat from soiling the oven interior.

- The meat tin should not be placed on a heated hotplate as this may cause the enamel to crack.

### How to use the Fan Oven

1. Turn the oven function control knob to 🌞.
2. Turn the thermostat control to the required temperature.

### Things to note
- The oven light will come on when the oven function control knob is set.
- The oven fan will operate continually during cooking.
- The thermostat control light will remain on until the correct temperature is reached. It will then cycle on and off to show the temperature is being maintained.

### The cooling fan
During cooking the cooling fan will operate continually.
It may run on after the oven is switched off to keep the controls cool. This is quite normal.

The action of the cooling fan will depend on how long the oven has been used and at what temperature. It may not switch in at all at lower temperature settings nor run on where the oven has only been used for a short time.

### Grilling 🌞

- Most foods should be placed on the grid in the grill pan to allow maximum circulation of air and to lift the food out of the fats and juices. Food such as fish, liver and kidneys may be placed directly on the grill pan, if preferred.
- Food should be thoroughly dried before grilling to minimise splashing. Brush lean meats and fish lightly with a little oil or melted butter to keep them moist during cooking.
- Accompaniments such as tomatoes and mushrooms may be placed underneath the grid when grilling meats.
- When toasting bread, we suggest that the top runner position is used.
- The food should be turned over during cooking, as required.

**How to use the Grill**

1. Turn the oven control function knob on.
2. Turn the thermostat control knob on the required temperature.
3. Adjust the grid and grill pan runner position to allow for different thicknesses of food. Position the food close to the element for faster cooking and further away for more gentle cooking.

Preheat the grill on a full setting for a few minutes before sealing steaks or toasting. Adjust the heat setting and the shelf as necessary, during cooking. During cooking, the cooling fan and the thermostat control light will operate in the same way as described for the fan oven function.

**Defrosting**

The oven fan operates without heat and circulates the air, at room temperature, inside the oven. This increases the speed of defrosting. However, please note that the temperature of the kitchen will influence the speed of defrosting.

This function is particularly suitable for delicate food which could be damaged by heat, e.g. cream filled gateaux, iced cakes, pastries, bread and other yeast products.

- Cover food with a lid, aluminium foil or plastic film to prevent drying out during defrosting.
- **Always cook thoroughly immediately after thawing.**
- Frozen food should be placed in a single layer when ever possible and turned over half way through the defrosting process.
- Only joints of meat and poultry up to 2 kg. (4 lb.) are suitable for defrosting in this way.

**How to Use Defrosting**

1. Turn the oven function control knob to.
2. Ensure the thermostat control knob is in the OFF position.

**Hints and Tips**

**On baking:**
Cakes and pastries usually require a medium temperature (150°C-200°C) and therefore it is necessary to preheat the oven for about 10 minutes.

Do not open the oven door before 3/4 of the baking time has elapsed.

Shortcrust pastry is baked in a springform tin or on a tray for up to 2/3 of the baking time and then garnished before being fully baked. This further baking time depends on the type and amount of topping or filling. Sponge mixtures must separate with difficulty from the spoon. The baking time would be unnecessarily extended by too much liquid.

If two baking trays with pastries or biscuits are inserted into the oven at the same time, a shelf level must be left free between the trays.

If two baking trays with pastries or biscuits are inserted into the oven at the same time, the trays must be swapped and turned around after about 2/3 of the baking time.

**On Roasting:**
Do not roast joints smaller than 1 kg. Smaller pieces could dry out when roasting. Dark meat, which is to be well done on the outside but remain medium or rare inside, must be roasted at a higher temperature (200°C-250°C).

White meat, poultry and fish, on the other hand, require a lower temperature (150°C-175°C). The ingredients for a sauce or gravy should only be added to the roasting pan right at the beginning if the cooking time is short. Otherwise add them in the last half hour.

You can use a spoon to test whether the meat is cooked: if it cannot be depressed, it is cooked through. Roast beef and fillet, which is to remain pink inside, must be roasted at a higher temperature in a shorter time.

If cooking meat directly on the oven shelf, insert the roasting pan in the shelf level below to catch
the juices. Leave the joint to stand for at least 15 minutes, so that the meat juices do not run out. To reduce the build up of smoke in the oven, it is recommended to pour a little water in the roasting pan. To prevent condensation forming, add water several times. The plates can be kept warm in the oven at minimum temperature until serving.

Caution!
Do not line the oven with aluminium foil and do not place a roasting pan or baking tray on the floor, as otherwise the oven enamel will be damaged by the heat build-up.

Cooking times
Cooking times can vary according to the different composition, ingredients and amounts of liquid in the individual dishes. Note the settings of your first cooking or roasting experiments to gain experience for later preparation of the same dishes. Based upon your own experiences you will be able to alter the values given in the tables.
## Baking and Roasting Table

**Fan Cooking**

Timings do not include pre-heating.
The empty oven should always be pre-heated for 10 minutes.

The temperatures quoted are guidelines. The temperatures may have to be adapted to personal requirements.
Cleaning and Maintenance

Before cleaning always allow the cooling fan to cool the oven down before switching off at the electricity supply.
This appliance cannot be cleaned with steam or with a steam cleaning machine.
The oven should be kept clean at all times. A build-up of fats or other foodstuffs could result in a fire, especially in the grill pan.

**Important:** Before carrying out any cleaning operation, the appliance must be disconnected from the power supply.

**External cleaning**
Regularly wipe over the control panel, oven door and door seal using a soft cloth well wrung out in warm water to which a little mild washing-up liquid has been added.
To prevent damaging or weakening the door glass panels avoid the use of the following:
- Household detergent and bleaches
- Impregnated pads unsuitable for non-stick saucepans
- Brillo/Ajax pads or steel wool pads
- Chemical oven pads or aerosols
- Rust removers
- Bath/Sink stain removers
Clean the outer and inner door glass using warm soapy water. Should the inner door glass become heavily soiled it is recommended that a cleaning product such as Hob Brite is used. Do not use paint scrapers to remove soilage.

**Cleaning materials**
Before using any cleaning materials on your oven, check that they are suitable and that their use is recommended by the manufacturer.
Cleaners that contain bleach should NOT be used as they may dull the surface finishes. Harsh abrasives should also be avoided.

**Oven Cavity**
The enamelled base of the oven cavity is best cleaned whilst the oven is still warm.
Wipe the oven over with a soft cloth soaked in warm soapy water after each use. From time to time it will be necessary to do a more thorough cleaning, using a proprietary oven cleaner.
Cleaning the Oven Door

Before cleaning the oven door, we recommend you to remove it from the oven.

Proceed as follows:

1. open the oven door completely;
2. find the hinges linking the door to the oven (Fig. A);
3. unlock and turn the small levers located on the two hinges (Fig. B);
4. handle the door by its left- and right-hand sides, then slowly turn it towards the oven until it is half-closed (Fig. C);
5. gently pull the oven door off its site (Fig. C);
6. place it on a steady plan;

Clean the oven door glass with warm soapy water and a soft cloth only. Never use harsh abrasives. Once the cleaning is carried out, refit the oven door, following the procedure in reverse.

Stainless steel or aluminium appliances:

We recommend that the oven door is only cleaned using a wet sponge and dried after cleaning with a soft cloth.

Never use steel wool, acids or abrasive products as they can damage the oven surface. Clean the oven control panel following the same precautions.

⚠️ **DO NOT** clean the oven door while the glass panels are warm. If this precaution is not observed the glass panel may shatter.

If the door glass panel becomes chipped or has deep scratches, the glass will be weakened and must be replaced to prevent the possibility of the panel shattering. Contact your local Service Centre who will be pleased to advise further.
Replacing The Oven Light

Disconnect the appliance

If the oven bulb needs replacing, it must comply with the following specifications:

- Electric power: 15 W/25 W,
- Electric rate: 230 V (50 Hz),
- Resistant to temperatures of 300°C,
- Connection type: E14.

These bulbs are available from your local Service Force Centre.

To replace the faulty bulb:

1. Ensure the oven is isolated from the electrical supply.
2. Push in and turn the glass cover anticlockwise.
3. Remove the faulty bulb and replace with the new one.
4. Refit the glass cover and restore the electrical supply.
If something is wrong

If the appliance is not working correctly, please check the following before contacting the Electrolux Service Centre:

Electrical Connection

The oven is designed to be connected to 230 V (50 Hz) electricity supply.

The oven has an easily accessible terminal block which is marked as follows:

- Letter L - Live terminal
- Letter N - Neutral terminal
- or E - Earth terminal

**THIS OVEN MUST BE EARTHED**

The cable used to connect the oven to the electrical supply must comply to the specifications given below.

It is necessary that you install a double pole switch between the oven and the electricity supply (mains), with a minimum gap of 3 mm between the switch contacts and of a type suitable for the required load in compliance with the current rules.

The switch must not break the yellow and green earth cable at any point.

The yellow and green earth cable should be 2-3 cm longer than the other cables.

**Important**

After installation and connecting, the cable must be placed so that it cannot at any point reach a temperature of more than 60°C above the ambient temperature.

Before the oven is connected, check that the main fuse and the domestic installation can support the load and that the power supply is properly earthed.

The manufacturer declines any responsibility should these safety measures not be carried out.

Instructions for Building In

Please ensure that when the oven is installed it is easily accessible for the engineer in the event of a breakdown.

Building In

The surround or cabinet into which the oven will be built must comply with these specifications:

- the dimensions must be as shown in the relevant diagrams;
- the materials must withstand a temperature increase of at least 60 °C above ambient;
- proper arrangements must be made of a continuous supply of air to the oven to prevent the oven overheating.

Dimensions of the oven and recess required are given in the relevant diagrams.

Securing the Appliance to the Cabinet

1. Open the oven door.
2. Fasten the oven to the cabinet placing the four distance holders (letter A) which fit exactly into the holes in the frame and then fit the four wood screws (letter B) provided.
Guarantee/Customer Service

Standard guarantee conditions

We, Zanussi - Electrolux, undertake that if within 12 months of the date of the purchase this Zanussi - Electrolux appliance or any part thereof is proved to be defective by reason only of faulty workmanship or materials, we will, at our option repair or replace the same FREE OF CHARGE for labour, materials or carriage on condition that:

• The appliance has been correctly installed and used only on the electricity supply stated on the rating plate.
• The appliance has been used for normal domestic purposes only, and in accordance with the manufacturer's instructions.
• The appliance has not been serviced, maintained, repaired, taken apart or tampered with by any person not authorised by us.
• Electrolux Service Force Centre must undertake all service work under this guarantee.
• Any appliance or defective part replaced shall become the Company’s property.
• This guarantee is in addition to your statutory and other legal rights.

Exclusions

• Damage or calls resulting from transportation, improper use or neglect, the replacement of any light bulbs or removable parts of glass or plastic.
• Costs incurred for calls to put right an appliance which is improperly installed or calls to appliances outside the United Kingdom.
• Appliances found to be in use within a commercial environment, plus those which are subject to rental agreements.
• Products of Electrolux manufacturer that are not marketed by Electrolux.

Service and Spare Parts

In the event of your appliance requiring service, or if you wish to purchase spare parts, please contact your local Service Force Centre by telephoning 0870 5 929 929.

Your telephone call will be automatically routed to the Service Force Centre covering your postcode area.

For the address of your local Service Force Centre and further information about Service Force, please visit the website at

www.serviceforce.co.uk

Before calling out an engineer, please ensure you have read the details under the heading “Something not working”. When you contact the Service Force Centre you will need to give the following details:

1. Your name, address and postcode.
2. Your telephone number.
3. Clear concise details of the fault.
4. The model and Serial number of the appliance (found on the rating plate).
5. The purchase date.

Please note a valid purchase receipt or guarantee documentation is required for in guarantee service calls.
Customer Care

For general enquiries concerning your Electrolux appliance, or for further information on Electrolux products please contact our Customer Care Department by letter or telephone at the address below or visit our website at

European Guarantee

This appliance is guaranteed by Electrolux in each of the countries listed at the back of this user manual, for the period specified in the appliance guarantee or otherwise by law. If you move from one of these countries to another of the countries listed below the appliance guarantee will move with you subject to the following qualifications:

• The appliance guarantee starts from the date you first purchased the appliance which will be evidenced by production of a valid purchase document issued by the seller of the appliance.
• The appliance guarantee is for the same period and to the same extent for labour and parts as exists in your new country of residence for this particular model or range of appliances.
• The appliance guarantee is personal to the original purchaser of the appliance and cannot be transferred to another user.
• The appliance is installed and used in accordance with instructions issued by Electrolux and is only used within the home, i.e. is not used for commercial purposes.
• The appliance is installed in accordance with all relevant regulations in force within your new country of residence.

The provisions of this European Guarantee do not affect any of the rights granted to you by law.
