Welcome to Lancaster Medical School

We want future healthcare to be aligned with the backgrounds and needs of the communities it serves. This means not only striving for excellence in research and academic standards, but also examining the factors that contribute to positive health for everyone.

As a young medical school in a high-ranking, forward-looking university, Lancaster has the autonomy to focus on the unfolding health needs of the population, at the local, national and global level. We are passionate about inspiring future generations to address health inequalities.

We are justly proud of the community we have created within Lancaster Medical School. As a team, we nurture talent to bring out the full potential of our students. We strive to create resilient, work-ready medical practitioners who are confident in themselves and confident in questioning the future direction of healthcare provision.

Our students learn to take an holistic approach to medicine and to explore health from all sides. There is no part of our teaching where book learning happens in isolation. We combine problem-based learning and clinical placements with teaching from academics and clinicians.

You should come to us armed with practical skill sets and plenty of self-discipline, as well as academic excellence. One question we will always ask of you, whichever medical career you choose: what impact will you have on health?

For more information visit lancaster.ac.uk/medicine
Supporting you all the way

Lancaster Medical School has a comprehensive network of formal and informal mechanisms in place to provide support and guidance, to help you cope with the transition to university, and throughout your clinical training.

Student Support Team
Our Student Support Team comprises a small group of academic and professional services staff who provide confidential help and advice on a range of issues that may affect your studies including: academic issues, physical and mental health issues, disability, personal or financial problems. They can also make referrals to specialised learning support, for counselling and to central support services.

Academic Tutor
When you begin your studies at Lancaster, you will be allocated an academic tutor: a member of academic or clinical staff, who will meet with you regularly every year to review your progress, and provide pastoral support, advice and guidance.

Student Peer Mentors
During welcome week, you will be introduced to your peer mentors: students in years two and four. Your peer mentors provide information and informal advice and guidance.

College System
Lancaster University is a collegiate university and you can access a range of support through your college advisor team and the college well-being officer. Find out more about our colleges: www.lancaster.ac.uk/colleges

The Ask Service
The Ask Service is your one-stop student enquiry service. Staff can offer you guidance on a wide range of personal and academic issues. www.lancaster.ac.uk/student-info

Meet our students: Unna

Unna is a second year student. This interview is from when she was just finishing her first year.

Why did you choose Medicine?
A lot of factors! So, in school I went through lots of phases of what I wanted to be, but I always came back to Medicine. I really liked sciences at school but I also really liked art. You might think how is there art in Medicine, but just think about the anatomical drawings – I love anatomy, it’s very science-y and artistic. And even surgery – when I went on work experience I saw surgery and even that felt artistic. Like I said, I love art and I sew a lot and make my own clothes and make sculptures and I could see the skills transferring from one to the other.

I was chair of the MedSoc at my school, so I had doctors come in and speak to the students and when I heard them speak, I could imagine myself having some kind of career in Medicine. What really resonated with me was how rewarding the job is, and I wanted to do something where it not only helped someone but helps me to grow and improve as a person; to be able to say at the end of the day that I’ve done something worthwhile.

Why Lancaster?
Medicine now is really technological – I saw a Da Vinci machine in work experience – and when I looked at the course at Lancaster, I saw the technology that they used and I thought that studying here would be especially beneficial to my future career.

Then there is the campus! It’s got a really good community … Perhaps over the pandemic this was even more important because I still made lots of friends, while people I know at big city universities did struggle.

The way they teach using problem-based learning (PBL) is a big part of why I chose Lancaster. It’s really about teamwork and in a way, because of the small groups, it is a bit like school. It really is a big leap from school to university and so for me this made the transition easier. In PBL you kind of have a teacher, and you talk to your friends because your PBL group only changes a couple of times a year, you become friends with them, and build a team. There’s so much team-working in Medicine that this was another big thing for me.

What do you do when you aren’t studying?
Actually, its another reason why I picked Lancaster, because they have really good sports societies. I’ve joined the netball society with my college and I really enjoy that. I’ve made friends outside my course and it’s a good way to keep fit. Training a couple of sessions a week which I can easily fit around my studies. My work/life balance is really important to me and I manage that so I don’t burn out.
Discover Medicine and Surgery

Early patient contact
In year one, you will learn in small group sessions with a GP tutor about the fundamental principles of GP care and how care in the community is delivered. There are also facilitated discussions on real patient consultations. In year two, you will begin your regular hospital placements; you will also engage in a variety of community-related activities. Early patient contact allows you to practise your history-taking and examination skills, whilst providing a real-life context for your learning.

Communication skills
Doctors need to be able to communicate effectively with patients and their families in difficult times, to be their advocate and help inform their choices. In year one, and continuing into year two, you will study the evidence base around effective communication and start to develop your communication skills in a safe environment, through interaction with simulated patients (actors). From year two onwards, you will develop your communication skills further through interaction with real patients in hospitals and GP practices.

Clinical skills
From the outset of your course, you will learn the practical procedures and examinations required for clinical practice. In year one, clinical skills training takes place in the Clinical Skills and Simulation laboratory at Lancaster University. In years two to five, you will learn to perform clinical skills on patients whilst on clinical placements, supervised by senior medical staff.

Learning medicine in the community
Traditionally, medical training has taken place primarily in a hospital setting. However, up to 50% of all UK medical graduates become GPs and even specialist healthcare in the UK is moving out of hospitals and towards community-based delivery. We place a strong emphasis on the importance of clinical placements in the community. Allied to these placements, we have a strong programme of community-orientated teaching across the breadth of the curriculum.

Health Innovation
The Health Innovation Campus has been developed to create a dynamic health-focussed community at Lancaster University, where health research and medical skills development are at the top of the agenda. It provides state-of-the-art teaching facilities - including a simulated hospital ward in our Clinical Skills Centre and a cutting-edge anatomy suite - as well as break-out spaces and shared facilities for working outside the classroom.

Student-focused
We are proud to remain one of the UK's smaller medical schools, even after the recent increase in the number of MBCHB places available. Our size allows us to offer you a student-focused learning environment within a highly supportive community.

Equipped
A modern medical school, Lancaster utilises new technologies in its anatomy teaching, including an Anatomage table for virtual dissection. Anatomage allows you to learn anatomy in tandem with learning to interpret clinical images. The Clinical Skills and Simulation laboratory is a mock clinical setting that offers a safe environment for students to learn and practise practical procedures, examinations and other clinical skills. It includes a fully installed SMOTS system in each clinical skills bay. We offer simulation-based teaching (using whole-patient manikins to replicate clinical scenarios) in years 1, 2, 4 and 5, and will be introducing the use of ultrasound scanning to practical procedures in year 5 in the 22/23 academic year. We have recently introduced two independent learning rooms to allow students to practice their clinical skills on a self-directed basis. Another exciting development for the coming academic year is the introduction of a Mobile Simulation Teaching Unit, an 8-bedded simulated hospital ward which will allow us to provide simulation across multiple locations.

Choice
In addition to the core curriculum, you’ll have the opportunity to pursue your own areas of interest in more depth through coursework assignments and Selectives in Advanced Medical Practice (SAMPs) which take place in year five. SAMPs will allow you to broaden your experience and explore areas of aspiration, whilst coursework will develop skills in retrieving and critically appraising information - skills essential for applying scientific rigour in your future medical practice.

If you choose an intercalated degree, you will take a 12-month break from studying Medicine to complete a BSc, an MRes, or an MPhil. You can decide to spend your Elective placement in the UK or overseas.

For more information visit lancaster.ac.uk/medicine
We asked Medical student Meltem Sarigul to explain PBL and how the sessions are run.

**How would you explain PBL to a new student?**

Problem-based learning is a mixture of independent learning and group work. You have a scenario that you read in a group, pick out important keywords and decide your own learning objectives. It’s good to make your own learning objectives because you can direct your learning, and if there’s a particular part that you’re interested in, you can go away and learn more about it.

Everyone in the group contributes and you try to bring in prior knowledge. So you discuss what you already know about the topic as a group, then you have a week or two to research the topic independently via reading, watching videos, there’s loads of resources that you can use and it’s up to you which ones you use. Then you come back and feed back. Explaining topics to other students solidified it in my head and also other students explaining things to me, especially if I wasn’t quite sure, helps it stick in your mind and it’s a team effort.

**How is a PBL session run?**

The group picks a student to run the session and a scribe to write down the ideas and the learning objectives, so it’s all run by the students. The tutors are there to guide you, they make sure that you’re staying on the right topic, if you’re way off with the learning objectives and it’s not meeting the intended ones, then they bring you back on topic.

**How do you think PBL prepares you to be a doctor?**

It instils responsibility and independent learning as it’s up to you to maintain your knowledge. It’s having the discipline to think: “this is my module for the next two weeks and I’m going to do the work”. It’s also figuring out how in-depth you need to go into a topic and which resources to use. It gives you critical skills as well, because you’re evaluating a resource. You’re given research papers to read, which again you’re evaluating, you’re trying to pick out what’s important, which is what you do as a doctor - evaluate research and critically analyse.

You say that working in a team is a big part of PBL, would you say there is a strong sense of community within the Medical School?

Yes definitely. In first year, you don’t know anyone and lectures offer limited time to talk to other students. Whereas in PBL, you’re in smaller groups, so you meet everyone in your group and every term, you change groups. You make friends and I think you develop a relationship with the tutors because a lot of them follow you through the med-school, so it’s nice to have that relationship with the staff as well.
Our four Curriculum Themes

**Medical Sciences**
The scientific knowledge that underpins doctors’ understanding of normal and abnormal structure and function, how a disease can present and progress, and how it can be investigated and managed.

In year one, you will gain an understanding of the anatomy, physiology, immunology, biochemistry, microbiology, and cellular and molecular biology of the healthy individual.

In years two to five you will explore disease pathology; you will learn about the pharmacology of therapeutic agents and the scientific basis of clinical investigation.

**Health, Culture and Society**
You will consider health and illness as a product of socio-economic, cultural and environmental factors, and explore the ‘how and why’ of health inequalities. You will begin to understand how the ability of an individual to develop health-enhancing behaviours is subject to individual, cultural and societal constraints.

You will also consider how people come to understand their illness, and the different ways people experience and respond to illness. Exploring these aspects of health and illness will help you to explain people’s responses, their motivations and attitudes towards a diagnosis, how they may cope with illness, and how you, as future doctors, can best meet their needs.

**Population Health**
The study of health and disease in a population that might be defined by, for example, geographical, occupational, cultural, or societal boundaries. This theme will give you the tools, skills, and knowledge necessary to understand how health translates at a population level by drawing on many fields including; public health, infectious diseases, epidemiology and quantitative research methods.

**Professional Practice, Values and Ethics**
You will explore the factors that shape medical practice such as the guidance to which health professionals must adhere, the laws that regulate medical practice, and how the attitudes of patients and health practitioners have developed over time. You will explore the uncertainties and complexities of medical practice, develop the ability to analyse ethically complex situations and improve your decision-making skills.

For more information visit [lancaster.ac.uk/medicine](lancaster.ac.uk/medicine)
Danielle is at the end of her fourth year at Lancaster Medical School. She is one of the founding members of our local MSF Society.

**Why did you decide to study Medicine?**
I was always interested in science at school and I knew from early on that I didn’t want an office job, and to me, Medicine didn’t sound like an office job, it sounded really exciting.

I had a placement at Chelsea and Westminster Hospital when I was 16 and that just blew my mind. I’ve always wanted to be part of that healthcare system where everything’s just happening all the time.

I wanted to study Medicine from before my GCSEs but when I changed schools to do my A Levels, I didn’t get the same support so I kind of parked the idea for a while … I took a gap year and really decided to explore what I wanted to do in more depth. I looked at Biomedical Science and Medicine but my gap year experiences really cemented in me this desire to do Medicine.

**What’s studying Medicine at Lancaster like?**
I didn’t expect to be put on placement so early – at Lancaster we do it in second year – and that was a big surprise. I thought I’d have to spend three or four years memorising off textbooks, but it’s been so much more fun and interactive. In first-year, we had quite a lot of teaching from clinical staff, so we were able to relate what we’d learned to clinical practice. That made a lot more sense to me, and made thing easier to learn as well.

**Are you involved in any societies?**
My friends and I actually set up the Friends of MSF (Médecins Sans Frontières). It’s part of a network of student societies that are part of MSF. It gives us a more global perspective.

Sometimes with Lancaster, people do say that it can be quite isolated, but we’ve brought in all these London links to Lancaster so we can be more connected to what is going on around the world. We’ve done fundraising and raised awareness around things like vaccine equity.

For more information visit lancaster.ac.uk/medicine
Electives

After completing your final examinations at the end of year four, you will spend four weeks on your Elective placement.

You will arrange your Elective yourself, with advice and guidance from Lancaster Medical School. Your Elective is an opportunity to broaden your clinical experience and participate in healthcare delivery in a different setting.

You may choose to spend your Elective in another country, learning how different cultural, social and environmental factors influence healthcare delivery outside the UK. Alternatively, you may choose to spend your Elective in the UK, to explore a particular speciality in more depth, for instance working within a tertiary care centre. We hope that electives will run normally in future, but we may need to alter the programme to take account of public health guidance at the time.

I went to Brisbane, Australia for my elective at the end of fourth year, and did a four-week placement in plastic surgery.

The whole experience was amazing, and as we had already done our final exams I found I was able to enjoy the placement a lot more. It allows you to see different healthcare systems and how they compare to the NHS.

Dr Beth Stockton
MBChB Medicine and Surgery
Class of 2018

For more information visit lancaster.ac.uk/medicine
MBchB Medicine and Surgery

Year One

In year one, you will be based primarily at the University. You will complete 11 two-week problem-based learning (PBL) modules, in which you will be introduced to key concepts in biomedical and social science, and learn about the normal structure and function of the human body.

You will attend weekly anatomy teaching sessions in the Clinical Anatomy Learning Centre (CALC), to explore human anatomy. You will receive a thorough grounding in basic clinical skills (examinations, procedures and techniques) through weekly training sessions in the Clinical Skills Centre, and you will undertake extensive communication skills training to prepare you for patient contact in years two to five.

Study Skills Module

In year one, you will complete a Study Skills Module that will prepare you for future coursework assignments. All coursework assignments are designed to encourage diversity of approach and to give you the choice and opportunity to explore particular interests, while developing intellectual and practical skills essential for rigorous scientific and medical practice. These skills collectively define the principles and practice of scientific thinking and investigation, and underpin assessment of student performance.

Community Attachment

In year one, you will learn in small group sessions with a GP tutor about the fundamental principles of GP care and how care in the community is delivered. There are also facilitated discussions on real patient consultations.

Each PBL module spans a two week period. This is a typical timetable for year one.

PBL: Problem-based Learning
CALC: Clinical Anatomy Learning Centre
CMP: Communication for Medical Practice

The following information describes the current MBchB curriculum. Throughout 2021 and 2022, Lancaster Medical School is undertaking a comprehensive curriculum review, including feedback from students, alumni, and clinicians, to ensure that our curriculum continues to deliver a quality student experience. Consequently, there may be changes to the structure of our curriculum that affect applicants for 2023–24 entry. Please check our website for updated course information before making an application.
Meet our students: Myles

Myles is completing his second year of the MBChB. He has a passion for really making a difference in patients’ lives.

Why do you study medicine?

Well, if you ask my parents, they’ll say I told them I wanted to be a doctor when I was two! But over the course of many years I changed my mind a bunch of times: I wanted to join the army (and I did cadets and seriously explored it as an option), but I somehow always came back to the idea of Medicine. I wanted to challenge myself and this was a great way to do that. I guess over my A levels and the work experience you need to get under your belt, there were moments when I questioned myself, do I really want to do Medicine ... In the end what made me decide was my little brother who was born with Down Syndrome and seeing how a doctor can affect someone’s life really made me see the that more than just the challenge of it, I wanted to do it to make a difference as well. It may be hard, but I was going to go for it.

What made you choose Lancaster?

When it came to applying to medical schools, it was difficult, the whole process is challenging with many things to consider. Being from South London, coming to Lancaster is very different but when I came up for interview (and my friends were like, you’re going to study on a farm), but when I came up here, everything about it was so nice. The place, the people, the vibe; it gave me the energy of a place where I’d like to study. It’s made me become a lot more independent, being so far away from home, almost 300 miles away from my own family.

Can you tell us about the Gateway to Medicine?

I came in through the Gateway to Medicine route. So, after my interview, I got an offer to study at Lancaster but on results day I just missed my offer and I was absolutely gutted but then I got a letter from Lancaster offering me a place on the Gateway year which if you complete, guarantees you a place. The Gateway year was brilliant and really changed the way I study using tools like active recall and spaced repetition which really works for me and now gives me the time to just enjoy university. It’s an intense year but really amazing.

What about societies?

Apart from Med Soc, I play football for my college (Furness) and really enjoy the socials and it means you meet more people and get to know people, it is easy to become a bit isolated. Becoming a member of a society means you meet more people and get to branch out socially.

MBChB Medicine and Surgery

Year Two

In year two, you will be on campus Monday and Friday. You will spend up to two days per week on hospital placement and engage in a variety of community-related activities.

There are 15 PBL modules in year two in which you will begin to think about the body in disease. You will build on the knowledge that you acquired in year one and learn about common disease states, their pathology and management through drugs, surgery and lifestyle interventions.

Hospital Placements

You will spend up to two days a week on hospital placement, for the entire year. You’ll spend time at different hospitals (from the University Hospitals of Morecambe Bay NHS Trust, Blackpool Teaching Hospitals NHS Trust and East Lancashire Hospitals Trust), dividing your time between General Medicine and General Surgery.

During your hospital placements, you will be involved in various learning activities: taking patient histories; preparing case presentations; observing and participating in various outpatient clinics. Your learning will be guided by observing and participating in various patient histories; preparing case presentations; observing and participating in various outpatient clinics. You will begin to think about the body in disease, allowing staff to monitor your learning from year one, complementing your increasing clinical experiences on placement.

Community

In Year 2 there are 3 blocks of Primary Care and Primary Care Clinical Teaching (PCCT). In the autumn there is the health inequalities module that will develop your wider understanding of the social, economic, and environmental issues that impact on the health and well-being of patients.

In the spring you learn about Health promotion and engage with local schools. This gives a first-hand experience of communicating with the public on health topics and the difficulties of effecting behavioural change, in addition to consolidating your own clinical understanding.

In the summer you have small group teaching sessions with a GP tutor and facilitated discussions on important conditions such as hypertension, liver disease and chronic kidney disease that will build on your other learning in PBL and clinical skills. We use real patient consultations to demonstrate how these conditions are managed in the primary care setting, and provide support if needed.

Special Study Module

In year two, you will complete a Special Study Module. You will explore a subject area in depth, sourcing and critically appraising relevant information, and presenting your results as a written report. Many students choose clinical topics in year two and work with a consultant in their chosen field, who provides guidance and support.

Each PBL module spans a two week period. This is a typical timetable for year two.
Year Three

In year three, you will complete five rotations, each of which will include patient contact, clinical teaching, PBL and other teaching activities, such as lectures or tutorials.

For some of your PBL modules, you will use real clinical cases instead of a written scenario; you will present information from your own patient histories and use this information as the stimulus for developing your learning objectives.

You will learn about common conditions, and their underlying pathology; you will learn the specific history-taking, examination and communication skills you need in the rotation’s speciality; you will learn about diagnosis, management and treatment of common conditions.

The 5 rotations are:

+ Obstetrics and Gynaecology, and Sexual Health
+ Paediatrics and Therapeutics
+ Managing long-term conditions
+ Community mental health
+ Care of the elderly with Neurology

In Obstetrics and Gynaecology you will learn primarily about normal pregnancy and labour. The Sexual Health rotation will develop your understanding of sexual health, including learning about sexually transmitted infections and contraception.

In Paediatrics you will learn about normal growth and development (from conception to adulthood), and how presentation in children may vary from adults.

In Therapeutics you will learn about commonly prescribed drugs, their mechanism of action, drug interaction and adverse drug reactions. Therapeutics learning is not restricted to this rotation – you will learn about relevant drugs whilst on placement during other rotations too.

In the Care of the elderly rotation, you will learn how presentation, treatment and recovery differ in an older patient. This rotation also includes Neurology: an introduction to common neurological conditions.

In the Managing long-term conditions rotation you will take part in General Practice Placements, and small group primary care academic teaching facilitated by experienced GP Tutors. Your learning will have a particular focus on disability and chronic illness. You will also learn about equality, diversity and inclusion in medicine, as well as climate change and health, and sustainable healthcare to equip you with the skills needed to practice medicine over the coming decades.

In the Community mental health rotation, you will learn about common psychiatric conditions.
**Year Four**

**MBChB Medicine and Surgery**

Year four is divided into two long blocks, each of which will include patient contact, clinical teaching, PBL and other teaching activities, such as lectures or tutorials.

As in year three, for some of your PBL modules, you will use real clinical cases instead of a written scenario; you will present information from your own patient histories and use this information as the stimulus for developing your learning objectives.

You will spend at least three days per week in a hospital setting. In addition to the two hospital blocks, you will also complete a programme of Primary Care clinical learning.

**Block One: Acute Adult Care**

This block will build on your clinical experience in year two, and further develop your understanding of General Medicine and General Surgery.

The block comprises four clinical placements as follows:

- Acute Medicine, including Acute Medical Unit, Cardiology, and Elderly Medicine.
- Medical Specialties, including Gastroenterology, Respiratory, Diabetes, Oncology, Palliative Care, and Haematology.
- General Surgery, including Perioperative care.
- Surgical Specialties, including Urology and Orthopaedics.

**Block Two: The Specialities**

This block will build on your experiences in year three, and further develop your knowledge and understanding of the specialities.

The block comprises four clinical placements as follows:

- Obstetrics and Gynaecology
- Psychiatry
- Paediatrics

**Primary Care Clinical Learning**

You will receive 30 full days of small group teaching in Primary Care with experienced GP tutors that will equip you with generalism skills that will benefit you throughout your chosen medical career whatever your preferred specialty.

You will have sessions that involve PBL cases, case-scenario discussions, clinical reasoning, presentations, small group work, role play, debate and critiquing academic papers.

There will be opportunities to discuss the management of patients you have encountered in addition to real patient consultations relevant to the topics being covered.

---

**Meet our students: Jordan**

Lancaster’s curriculum themes of population health, culture and society just really married up to my application. And when I got here and we did things like ethics, sociology, psychology, demographics, and epidemiology all alongside Medicine, everything made sense.

Alongside the medical sciences, Lancaster has a really strong focus on these other aspects of health.

**What got you interested in Medicine?**

Starting off at secondary school, I definitely enjoyed the science subjects more and so I tailored my A level choices to those subjects. I knew that I wanted to do something scientific but I would say that I’m quite an extroverted person and so I also wanted to do something that would let me talk to other people.

I did Biology, Chemistry, History and Geography, and Maths A levels, and oddly it was when we started doing population health in Geography, and thinking how health affects society, coupled with how I enjoyed Biology and understanding the workings of the human body that really drew me to Medicine. All that, along with my desire to work closely with other people kind of made Medicine an obvious choice.

In the end, I took a year out after my A levels and it was during that year that I really kind of cemented what was important to me.

---

**Have you enjoyed your time here?**

I really like it here. There are fewer people here – my year was only about fifty students* – and so I got to know everyone better and there has been lots of support from staff. We know the staff by name, there’s a lot of talk between the years, which is great. In terms of coming to university, I don’t think anyone is ever really prepared – it is quite a step up – but there are really good people around to support you and so it all works out.

---

**What societies have you been involved in?**

I was Secretary for MedSoc in first year which was a really good way to get to know other years quickly. In second year I helped coordinate first year teaching through LU Pals which was our peer-assisted learning society. I did social media for our Global Health Society which is part of a national society and so there were national conferences and societies at other medical schools that we could go and visit. In third year I was president of that peer-assisted learning society. Now in fourth year, I’m vice-president of the BAME Medic Society which I helped set up.

*Lancaster Medical School’s current annual intake is 129 students.
MBChB Medicine and Surgery

**Year Five**

In year five, you will undertake five clinical attachments.

Two of the five are Selectives in Advanced Medical Practice:

+ Emergency Medicine
+ GP, Primary Care Placements
+ Selectives in Advanced Medical Practice 1
+ Selectives in Advanced Medical Practice 2
+ Shadowing a Foundation Year 1 Trainee Doctor

You can choose to follow Selectives in Advanced Medical Practice in a wide variety of different clinical specialities, providing you with the opportunity to explore different potential medical careers during the course of your undergraduate degree.

Each attachment consists of seven weeks of intensive clinical experience. A portfolio is used to guide and assess your learning. You will take responsibility for your own learning, engaging in reflective practice, to prepare you for Foundation training and lifelong learning.

Lancaster focuses on the holistic view of the patient. Whilst ensuring we learn our Medical Sciences, there seems to be a much greater focus at Lancaster, compared to other medical schools, on health, culture and society, professionalism and ethics, and population health. This makes you a more well-rounded person and gives you a greater ability to weigh up information and make decisions when you begin work.

---

Dr Megan Prince

MBChB Medicine and Surgery

Class of 2020

For more information visit lancaster.ac.uk/medicine
Soorya Sunil took a year out from studying Medicine and Surgery at Lancaster Medical School to study a BSc in Reproductive and Developmental Sciences at Imperial College London.

What is an intercalated degree and how does it fit alongside your medical studies?
You have the option of taking a year out from your medical degree to do another degree. There is a wide variety of different options; you can even do a degree related to management, or ethics and law.

What made you choose to intercalate?
I just wanted an extra degree basically! Even before I came to medical school, I knew I wanted to intercalate. A lot of doctors take extra degrees when they start working, but if you’re doing it later in your career, you have to fund that yourself and you also have other responsibilities like family and a job to juggle, whereas doing it as a student, the NHS pays for my tuition fees.

What did you study?
I did a BSc in Reproductive and Developmental Sciences at Imperial College London, which I picked because I have an interest in obstetrics and gynaecology. I thought it would work really well with that interest and it would help me get onto the specialty programme.

What did you learn?
My intercalated degree was split into three modules. The first module was learning about the hormones of pregnancy, then my second module was learning about the actual physiology of pregnancy and childbirth and the third module had a bit of paediatrics in it, so I had to learn about paediatric infections and allergies, and then we had a three-month research project. My project looked at the relationship between race and risk-factors for recurrent miscarriage. It was really interesting and I learned a lot of extra skills.

How do you hope your intercalated degree will benefit your career in medicine?
In terms of my future prospects, because I want to go into obstetrics and gynaecology, the degree I studied will really help with that. One thing I would recommend future students to do is to go onto the royal college websites to see potential courses to look into.
Lancaster Medical School considers applications to its medical degree programme in a four stage process.

**Stage One: Academic Aptitude**

Academic qualifications: all applicants who meet the academic entry requirements will progress to stage two.

- A-level: AAA or AAB plus a B in an EPQ or 4th AS subject. A-levels must include two from: Biology, Chemistry or Psychology.
- GCSE: Minimum score of 13 points from eight subjects (A or A* or 7-9 = 2 points; B or 6 = 1 point). The eight subjects must include Core and Additional Science (or Biology, Chemistry and Physics), Maths and English (at grade B/6 or above). If you are not studying Biology or Chemistry at A-level, then you must have achieved at least grade A/7 at GCSE.

**Stage Two: Biomedical Admissions Test (BMAT)**

If you meet our academic entry requirements, your application will be ranked according to your Biomedical Admissions Test (BMAT) score. This is a competitive stage of the selection process and only the top-ranking applicants will progress to stage three.

**Stage Three: Multiple Mini Interviews**

No applicant will be made an offer without interview. The format of interview is multiple mini interviews.

The multiple mini interviews consist of 12-14 different ‘stations’, most of which will be 5 minutes long. Some stations will consist of a short interview, where you may be asked questions about your career choice, work experience or suitability for a medical career. At others, you may be asked to read a short paragraph or watch a short video clip, take some notes and then discuss at a subsequent station. An additional 20 minute station will involve group work and will assess your suitability for our problem-based learning curriculum.

**Stage Four: Fitness to Practise**

All applicants must have the potential to function as a fully competent doctor and fulfil the rigorous demands of professional fitness to practise. More information can be found on the General Medical Council’s website: www.gmc-uk.org/education/standards-guidance-and-curricula/guidance/professional-behaviour-and-fitness-to-practise

UCAS Personal Statement should demonstrate:

- Insight into a medical career and your own suitability, drawn from your personal, work and voluntary experience.
- An understanding of the NHS core values and their importance in the delivery of modern healthcare.
- A commitment to society; giving up your time for the benefit of others, including voluntary work or significant caring roles.
- Effective written communication skills; a coherent, well-structured and insightful personal statement.

MBChB Medicine and Surgery with a Gateway Year

Course overview

The MBChB Medicine and Surgery with a Gateway year is a six year course. It offers a pathway to a degree in Medicine for applicants who are not eligible for our five year MBChB programme. (See Who can apply? below.)

You will complete the Gateway Year during the first year of this six-year course, after which you will begin Year 1 of the MBChB programme (dependent upon satisfactory academic progress).

In your Gateway year, you will study a range of modules designed to prepare you for further study. These include:

- Anatomy and Tissue Structure
- Genetics
- Hormones and Development
- Infection and Immunity
- Organic Structure (Chemistry)
- Chemical Reaction Kinetics (Chemistry)

The Gateway year is designed to prepare you for successful progression onto Year 1 of the MBChB programme by developing your knowledge, academic writing and independent study skills.

If you fail to meet the academic criteria for progression onto Year 1 of the MBChB, you may be eligible to progress onto Year 2 of another degree offered by Lancaster University's Faculty of Health and Medicine (for example, BSc Biomedicine). At the end of the Gateway Year, if you do not progress onto the MBChB or another degree at Lancaster University, you will be awarded a Certificate in Higher Education.

Entry Requirements and Selection Process for 2023 entry

Who can apply?

To be eligible for Lancaster Medical School's MBChB Medicine and Surgery with a Gateway year you must:

- Be resident in the UK. Candidates from the EU or overseas are not eligible for this programme.
- Fulfil our widening participation criteria. These include being first in your family to attend university, coming from a low income household or attending a school or college whose A level results are below average for state-funded schools in England. Please see our website for more details about our widening participation criteria and how these are used to determine your eligibility for this programme.
- Meet our academic criteria at GCSE and A Level.

GCSE: requirements will vary depending on individual circumstance but all applicants must have achieved grade B (or grade 6) in Core & Additional Science (or Biology, Chemistry and Physics), Maths and English Language.

A Level: be predicted ABB - ABC/BBB in three subjects including Biology and Chemistry (see our website for restrictions).

Applicants who take longer than two years to achieve the required grades at A Level (resitting either Year 12 or 13) or who have already completed another undergraduate degree are not eligible for Medicine and Surgery with a Gateway year.

Selection for 2023 Entry

Lancaster Medical School considers applications to the Medicine and Surgery with a Gateway year programme in a four stage process. This selection process is identical to that for the main medical degree programme (see p29), apart from Stage One.

Stage One: Academic Aptitude

- A level: ABB. A levels must include both Biology and Chemistry. BTEC not accepted on its own. Please contact the Medical School for details.
- GCSE: Minimum score of 10 points (A or A* or 7-9 = 2 points; B or 6 = 1 point). Must include Core and Additional Science (or Biology, Chemistry and Physics), Maths and English (at grade B/6 or above).

Stages Two to Four:

Please see p29

Meet our students: Twezher

Twezher has found that teaching at Lancaster suits his learning style perfectly.

What made you want to study Medicine?

I made the decision to do Medicine quite early on in life, although I did originally want to be an architect when I was kid...

Everyone goes through loss and for me it was my grandmothers whom I never got to meet; both passed away from health complications, and for one of them, more could have been done for her. That was a motivation for me. Also, the countryside and everything around here is really beautiful.

Going back to how they teach us at Lancaster, I really didn’t like A levels. I didn’t like how structured they were and how spoon-fed you are. A levels felt like an exam machine – do what you need to do to pass the exams, and that’s it. I wanted independence and independent study so I chose a university that offered that. I’m sure it’s not for everyone but I wanted to just go off on my own and find out how things are, instead of just being put through an exam machine again. It’s made my organisation skills so much better because you do need to set the time yourself to research the topic.

You aren’t just memorizing, you are investigating.

And why study at Lancaster?
The reason I chose Lancaster was because of the course structure and especially problem-based learning (PBL). I’ve always liked that you could be given a problem and then go away and solve it, and so I thought the course here was more interactive – I honestly don’t know how I’d be doing if they just gave us books to read and learn. So in PBL you learn stuff and then apply it to what you’re learning; it helps you think more intuitively. And you’re learning together with a small group and so while they [the tutors] recommend books and resources, you can go away and read around the topic, so when you come back together everyone brings different information, or different points of view. It makes the learning experience much richer.

Also, the countryside and everything around here is really beautiful.

Going back to how they teach us at Lancaster, I really didn’t like A levels. I didn’t like how structured they were and how spoon-fed you are. A levels felt like an exam machine – do what you need to do to pass the exams, and that’s it. I wanted independence and independent study so I chose a university that offered that. It’s made my organisation skills so much better because you do need to set the time yourself to research the topic.

You aren’t just memorizing, you are investigating.

Postgraduate Foundation training and beyond

At the end of the undergraduate programme you’ll receive your degree. The General Medical Council (GMC) approves your university’s degree as a primary medical qualification (PMQ). This is important because, provided there are no concerns about your fitness to practise, a PMQ entitles you to provisional registration with the GMC for a licence to practise medicine in the UK.

The GMC is introducing a Medical Licensing Assessment – the MLA. The MLA will create a demonstration that anyone obtaining registration with a licence to practise medicine in the UK has met a common threshold for safe practice. To obtain a PMQ, graduates from 2024 onwards will need to have a degree that includes a pass in both parts of the MLA.

One part will be a test of applied knowledge (the AKT), set by the Medical Schools Council working on behalf of all UK medical schools and held at your medical school. The GMC will quality assure the AKT and all medical schools will be asked to meet requirements around the design and delivery of the AKT. The other will be an assessment of your clinical and professional skills delivered by your medical school (the CPSA). Each school’s CPSA must meet GMC-set quality assurance requirements. The MLA will test what doctors are likely to encounter in early practice and what’s essential for safe practice.

It intentionally will not cover the whole of a medical school curriculum. So, you will also need to meet your university’s degree requirements. You can find out more about the MLA for UK students at www.gmc-uk.org/mla.

Provisional registration is time limited to a maximum of three years and 30 days (1125 days in total). After this time period your provisional registration will normally expire. Provisionally registered doctors can only practise in approved Foundation Year One posts: the law does not allow provisionally registered doctors to undertake any other type of work. To obtain a Foundation Year One post you will need to apply during the final year of your undergraduate programme though the UK Foundation Programme Office selection scheme, which allocates these posts to graduates on a competitive basis.

All suitably qualified UK graduates have previously found a place on the Foundation Year One programme, but this cannot be guaranteed in the future, for instance if there were to be an increased number of competitive applications from non-UK graduates.

Successful completion of the Foundation Year One programme is normally achieved within 12 months and is marked by the award of a Certificate of Experience. You will then be eligible to apply for full registration with the General Medical Council. You need full registration with a licence to practise for unsupervised medical practice in the NHS or private practice in the UK.

There is some discussion about whether to remove provisional registration for newly qualified doctors.

If this happens then UK graduates will receive full registration as soon as they have successfully completed an MBChB (or equivalent) degree. It should be noted that it is very likely that UK graduates will still need to apply for a training programme similar to the current Foundation Programme and that places on this programme may not be guaranteed for every UK graduate.

Although this information is currently correct, students need to be aware that regulations in this area may change from time to time.

For more information visit lancaster.ac.uk/medicine
Open Days

Open Days are your opportunity to come and meet us in person.

As you go through the process of deciding what you want to study and what kind of university you want to study at, at some point you do need to go and visit them. There is no substitute for coming to visit our beautiful campus, to check out our award-winning accommodation and generally get a feel for the place. You’ll find us to be a welcoming, inclusive community with a fully accessible campus.

Dates:
2 July 2022
16 July 2022
17 September 2022
15 October 2022

Campus Tours

Outside of the Open Days, we organise regular campus tours to give you a flavour of life at Lancaster. You can book onto Open Days and Campus Tours at www.lancaster.ac.uk/visitus

Offer holder events

If you get an offer to study at Lancaster University, you will be invited to come to an Offer holder event day. These are very different to Open Days, where the focus is more on getting a general feel for the University. If an Offer holder event has one purpose it is to give a snapshot of what it is actually like to be a student studying at Lancaster University. So, your offer holder event might comprise a taster session in problem based learning, clinical skills or anatomy, or a real lecture or seminar. It will be hosted not only by our academic team, but by our students. Who knows, you might well end up meeting your fellow first-year students for the very first time.

Visiting us

Lancaster is very well served by road, rail and air networks and is nearby to major cities such as Manchester and Liverpool. More information about visiting the University can be found at www.lancaster.ac.uk/travel

Please note: visits to campus for Open Days, Campus Tours, and Offer holder events may be subject to restrictions if government guidance changes. Please visit www.lancaster.ac.uk/visitus for up to date information.

Disclaimer

The information provided in this brochure relates primarily to 2023/4 entry to the University and every effort has been taken to ensure the information is correct at the time of printing in June 2022. The University will use all reasonable effort to deliver the course as described but the University reserves the right to make changes after going to print.

You are advised to consult our website at: www.lancaster.ac.uk/study for up-to-date information before you submit your application.
